

UAT-505-EUR Underground Utility Locator Kit

Detect and measure depth of buried pipes and cables

Increase productivity on the job site with precise and accurate locating

The Beha-Amprobe UAT-505-EUR Underground Utility Locator Kit is the rugged, economical solution for locating underground energized and de-energized wires, cables and pipes. The Transmitter utilizes the proven 33 kHz frequency, which is ideal for most locating applications. With the Receiver, trace the signal in Induction or Direct Test Leads Connection Modes. The Receiver features fast sound and meter response and easy depth measurements to 20 feet at the push of a button, as well as highly sensitive Power and Radio Modes which detect energized wires and radio signals on underground lines.

Features

- Locates underground energized and de-energized wires and cables
- Locates underground metal pipes
- Multiple tracing modes for locating and tracing energized and de-energized utilities in a variety of applications: Power Mode, Radio Mode, Induction Mode and Direct Test Leads Connection Mode (de-energized utilities only)
- Depth measurement up to 6 m, detect and trace utilities buried up to 30 m deep (Direct Test Leads Connection Mode only)
- Receiver features a high-contrast display with an automatic backlight and semi-automatic gain control for fast signal location and control
- 33 kHz transmitting frequency: best frequency for general locating
- Complete ready-to-use kit: Receiver, Transmitter, test leads, batteries and carrying case

Safety Certification

@ (€ 🕸 🖫

All Beha-Amprobe tools, including the Beha-Amprobe UAT-505-EUR, are rigorously tested for safety, accuracy, reliability, and ruggedness in our state-of-the-art test lab. In addition, Beha-Amprobe products that measure electricity are listed by a 3rd party safety lab, either UL or CSA. This system assures that Beha-Amprobe products meet or exceed safety regulations and will perform in a tough, professional environment for many years to come.

Water, wastewater and sewage

Electrical utilities distribution

Construction

Transportation

Outdoors facilities maintenance

Who needs the UAT-505-EUR?

- Wastewater engineers
- Pipefitters
- Plumbers
- Construction contractors
- Field engineers
- Inspectors
- Civil engineers
- Government inspectors

Identify Underground Pipes, Cables & Wires

The Beha-Amprobe UAT-505-EUR discovers the location of underground utilities such as sewer lines, power lines and water lines up to 30 m deep, with accurate depth measurement to 6 m when connected to the Transmitter. The Transmitter operates at a 33 kilohertz (kHz) frequency signal, which provides the most reliable results for many locating applications. The kit also comes with a connection cables and alligator clips for connecting the transmitter to the buried pipe or de-energized cable or wire to be traced.

Expert Features for Any Situation

The UAT-505-EUR can be used in different modes for optimal tracing in many situations.

Receiver

- Power Mode locates energized wires with a 50/60 Hz frequency. The Receiver alone detects the electromagnetic fields emitted by buried energized lines conducting currents.
- Radio Mode uses the Receiver to detect radio waves coming from cellular towers, radio stations, etc. that are picked up and carried by underground metal objects, such as cables or pipes.

Receiver + Transmitter

- Induction Mode uses the Transmitter to wirelessly induce a signal into a buried pipe, cable, or wire. The Receiver then detects the signal carried by the buried utility.
- In Direct Test Leads Connection Mode, the Transmitter is connected to the buried de-energized cables or utilities with test leads (provided there is an available access point to the utility). The Transmitter then sends a signal across the wire or pipe.*
- If it is not possible to gain access to a cable for making an electrical contact or it is not safe to do so, the optional **Signal Clamp** provides an efficient and safe method of applying a locate signal to a cable.

The UAT-505-EUR can also trace non-metallic pipes in Induction or Direct Test Leads Connection Modes. Some of these pipes have embedded metal trace that will conduct signal for tracing. For pipes without embedded metal, use a conductive tracing tape.

*Note:

The UAT-500-TE Transmitter <u>should never</u> be connected to an energized circuit. In this case use the Beha-Amprobe UAT-600-TE Transmitter which is safety rated and can be safely used to connect to energized circuits up to CAT IV 600 V.

Optional Accessories

AF-600-EUR A-Frame ground fault locator, UAT-600-TE Transmitter, SC-600-EUR Signal clamp, TL-600-25M Extension test lead

AF-600-EUR A-Frame Ground Fault Locator

- Identify any point of leakage around a cable
- Locate cable and wire ground faults, sheath faults or pipeline coating defects, where the utility is in direct contact with the ground
- Find the exact point where metal is touching the ground and power is leaking, ie, a shield is rusted or a rubber buffer is broken, creating noise on a cable
- Advanced technology and digital signal processing makes pinpointing process fast, accurate and clear:
- Compass guidance with numeric fault field strength indicates the direction of the fault
- Distance sensitive left and right arrows guides the user to precisely follow the path of the buried utility
- Automatic gain control quickly detects tracing signal and precisely adjusts the A-Frame sensitivity
- Adjustable volume controls
