Mounting Hardware for Strain Relief Bars

SPECIFICATIONS

Mounting hardware for strain relief bars shall allow select 19-inch strain relief bars to mount to single rails that include square hole openings or standard threaded holes. The kit for cage nut rails shall include a cage nut, a 1-inch screw to support the strain relief bar behind a patch panel and a hex nut to secure the strain relief bar in place. The threaded kit shall include the 1 inch screw and a hex nut.

TECHNICAL INFORMATION

| Packaging: | Includes 100 of each per package |
|------------|--|
| | Cage Nut Kit: cage nut, 1" #1224 screw and hex nut |
| | Threaded Kit: 1" #1224 screw and hex nut |
| Material: | Zinc plated steel |

KEY FEATURES AND BENEFITS

| Adds a Mounting Location : | Provides a secure way to mount strain relief bars to a cage nut equipment rail | | | | | | |
|----------------------------|---|--|--|--|--|--|--|
| Offers Flexibility: | Ability to choose the right bar for the installation or to a standard threaded rail | | | | | | |

APPLICATIONS

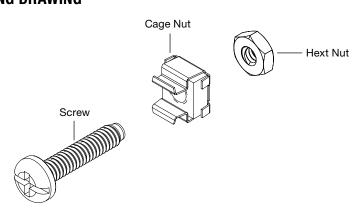

The mounting hardware for strain relief bars will provide a location where standard 19-inch strain relief bars can be securely mounted behind a patch panel.

The kit offers the ability to mount strain relief bars to single rails with square hole opening where cage nuts are required or to single rails with standard threaded holes.

The 1-inch screws in the kit will replace two of the screws included with the patch panel, one for each side, the 1-inch screw will extend on the back side of the patch panel providing a location where the bar can be mounted; the hex nut will secure it in place. For better support, it's recommended to use the bottom mounting holes located on the patch panel.

The mounting hardware allows installers the ability to choose the appropriate strain relief bar to support the rear cable regardless of which patch panel is being used.
