

ET330

Installation and use instructions
5 A CT connection three-phase energy transducer with
Modbus RS485 portCode 8021909
The transducer measures active and reactive energy, summing import (connection mode on) or separating imported energy from exported. It manages two energy tariffs using a digital input or manual command. It is equipped with an opto-isolated digital output for remote measurement and three communication terminals, dual RI45 connectors or optical infrared communication port (coupling with OptoProg interface). It measures three DIN modules. A run-hour meter is available to link the energy to the relevant working hours.Istruzioni installazione e uso
Trasduttore di energia trifase connessione TA 5 A con
interfaccia Modbus

Codice 8021909

Il trasduttore misura l'energia attiva e reattiva, comandando importo/ esporto (se attivata) oppure importo/ energia imposta da quella esportata. Gestisce due tariffe di energia tramite ingresso digitale o comando manuale. È dotato di una porta Modbus RS485 per la comunicazione remota, tre terminali di misurazione, due terminali, dual RI45 connettori o porto di comunicazione ottica a infrarossi (con interfaccia OptoProg). Misura tre moduli DIN. Un contatore di ore funziona.

Installations- und Gebrauchsanweisung
Energiewandler, dreiphasig, 5 A CT Anschluss mit
Modbus-Schnittstelle

Artikelnummer 8021909

Der Wandler misst die aktive und reaktive Energie, summiert den Import (bei der einfache easy connection) oder trennt den importierten Energie von der exportierten Energie. Es werden zwei Energieraten über Digitaleingang oder Modbus-Befehl verwaltet. Er ist mit einem RS485 Modbus Port ausgestattet, um Schraubensicherungen, Dual RI45 Modbus RTU Ports oder einen optischen Bus zu kommunizieren. Einige der optischen Schnittstelle OptoProg erhältliche Messungen mitzutragen. Es misst drei DIN-Module. Ein Betriebsstunden-Zähler ist verfügbar, um die Energie mit den jeweiligen Betriebsstunden zu verknüpfen.

Pulse weight: Proportional to the product of CT and VT ratios:
Weight (pulses/kWh): CT x VT
1 > 700
10 700-7000
100 7000-700
1000 < 7.1

Duration: 90 ms

Color: Red and orange

General features

Terminals: N, 1, 2, 3: section 4 mm², torque 0.6 Nm

Protection grade: IP20

Dimensions: See Fig. 12

Cleaning:

Use a slightly dampened cloth to clean the display instrument; do not use abrasives or solvents.

SERVICE AND WARRANTY

In the event of a fault, contact your distributor for information on the warranty, contact the CARLO GAVAZZI branch or distributor in your country.

UL NOTES

INTENDED USE: measurement of electrical parameters, indoor use. To be used in installations with overvoltage cat. III, measurement cat. II or lower. To be installed by skilled people only. A readily accessible circuit breaker shall be incorporated in the building installation wiring. The circuit breaker must be located in the building installation wiring and not in the building equipment wiring. Installation: 20A. Current measuring input terminals must be connected through R/C or listed measuring transformers in compliance with requirements of UL61010-1 or ANSI/IEEE C57.13 or equivalent. Protection against short circuits must be provided. Power distribution system: to prevent damage: to reduce risk of electric shock, always open or disconnect circuit from power-distribution system. Service: before installing or servicing current-sensing transducers, turn off the power.

GENERAL WARNINGS

DANGER! Live parts. Heart attack, burns and other injuries. Disconnect the power supply and load before installing the transducer. Protect terminals with covers. The energy transducer should only be installed by qualified/authorized personnel.

These instructions are an integral part of the product. They should be consulted for all situations tied to installation and use. They should be kept within easy reach of operators, in a clean place and in good conditions.

ET330

Instructions d'installation et d'utilisation
Transducteur d'énergie triphasé à 3 branchements S + TC
avec Interface Modbus
Code 8021909

Le transducteur mesure l'énergie active et réactive, en additionnant (mode easy connection) ou en séparant l'énergie importée et exportée. Il gère les deux tarifs d'énergie et la gestion d'unités numériques.

Il est équipé d'un port Modbus RS485 pour communiquer les mesures, disponible en version bornes à vis, connecteur double RJ45 ou port de communication optique. Référence: OptoProg ou OptoProg+Modbus. Tous trois modèles.

Un compteur horaire de fonctionnement est disponible pour relier l'énergie aux heures de fonctionnement pertinentes.

Instrucciones de instalación y uso
Transductor de energía trifásica de conexión CT S + A
con interfaz Modbus
Code 8021909

El transductor mide la energía activa y reactiva, combinando las dos conexiones o separando las energías suministrada y consumida. Permite la medida según los tarifas usando una entrada para el consumo Modbus. Está equipado con un puerto Modbus para comunicar las medidas, disponible en versiones bornes a vis, conectores dobles RJ45 o port de comunicación óptica (junto con una interfaz OptoProg). Mide tres módulos DIN. Dispone de un contador de horas de funcionamiento disponible para conectar la energía a las horas de funcionamiento pertinentes.

Installations- og betjeningsvejledning
3-faset 5 A CT-tilslutning energitransduktør med
Modbus grænseflade
Code 8021909

Transducteur mäter aktiv och reaktiv energi vid att optimisera (easy connection) eller separera för att skapa olika räkningar. Han mäter också de två räkningarna och han hanterar digitala sifferställare. Den är utrustad med en RS485 Modbus-port för att kunna meddela om mätningar, som är tillgängliga genom skruvterminaler, RJ45-dubbeltakts eller en optisk, infraröd kommunikationsport (tillsammans med optisk OptoProg gränsflöde). Den mäter tre DIN-moduler. En tidsräknare finns till för att koppla in energin med relevanta arbetsstiderna.

ET330

Installation and use instructions
5 A CT connection three-phase energy transducer with
Modbus RTU port
Code 8021850

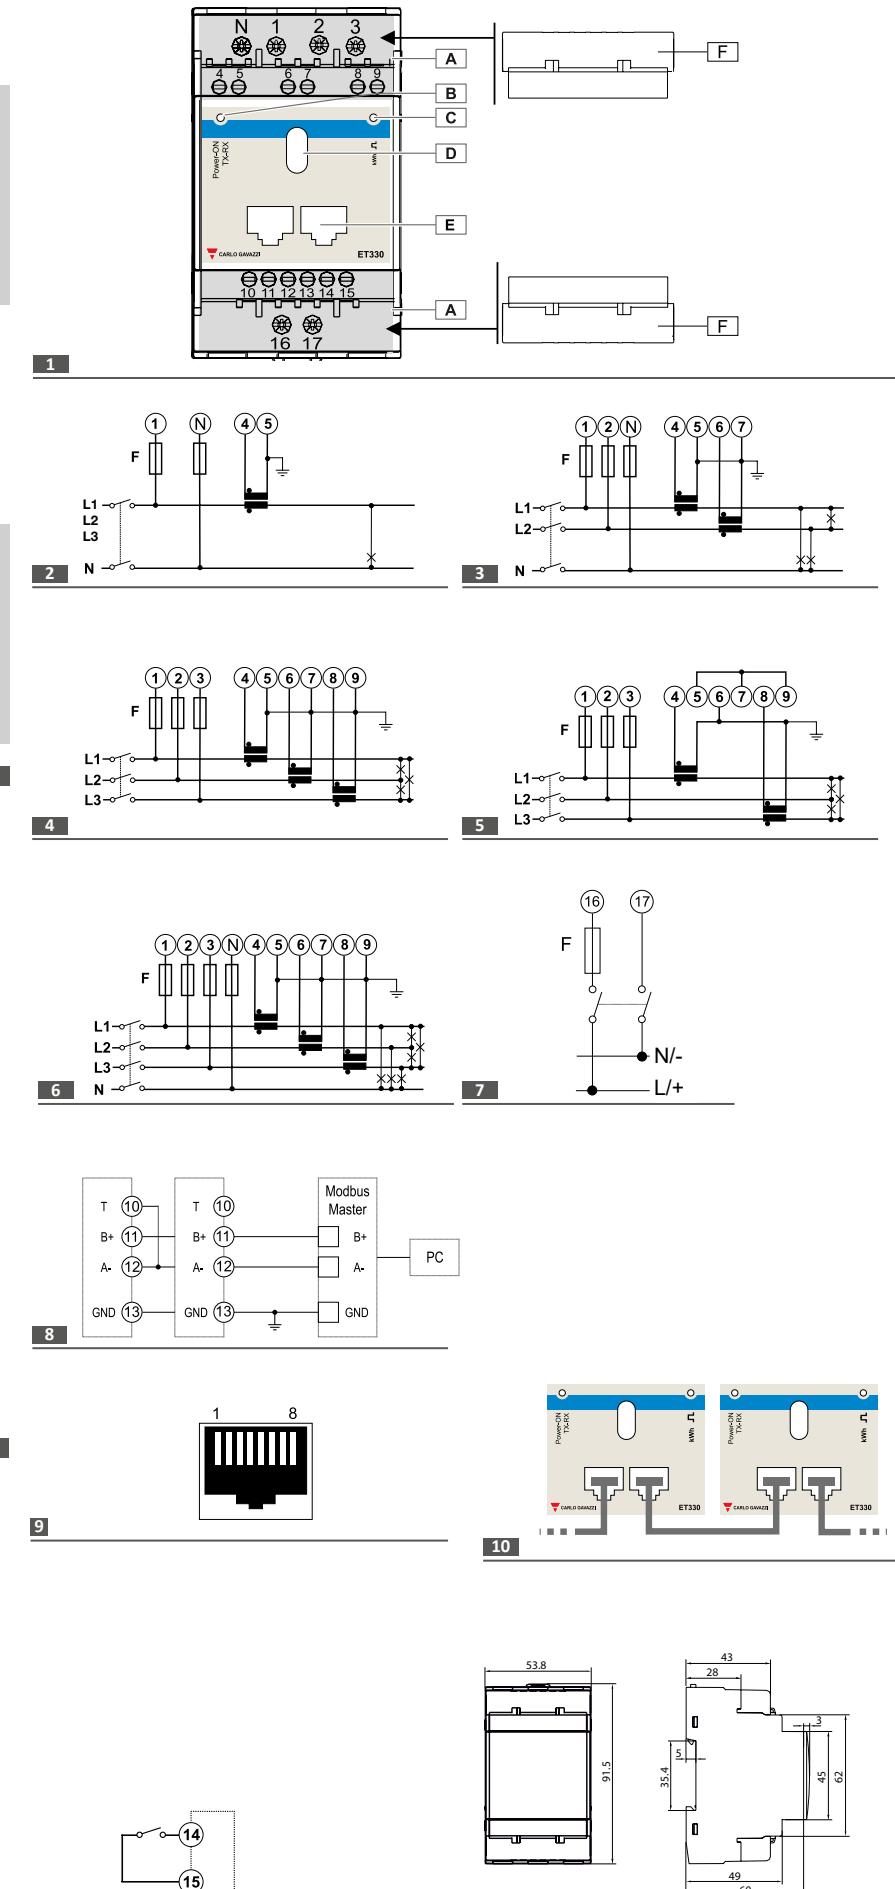

The transducer measures active and reactive energy, summing (easy connection mode) or separating imported energy from exported energy. It manages two energy tariffs using a digital input and communication port. It is equipped with an RS485 port to communicate measurements, Modbus port and communication port (coupling with OptoProg optical interface). It measures three DIN modules. A run-hour meter is available to link the energy to the relevant working hours.

安装和使用说明
5 A CT 连接三相换能器，带有 Modbus 接口
代码 8021850

换能器可测量有功和无功电能，合并（简易连接模式开启）或分隔输入的电能与输出的电能。它使用数字输入或 Modbus 命令管理两个电能费率。该换能器配备一个 RS485 Modbus 端口，可通过串行端子、双 RJ45 连接器或光纤外通信端口（与 OptoProg 光学接口耦合）。可测量三个 DIN 模块。运行小时计数器可将电能与相关工作小时数关联起来。

安装及使用指示
5 A CT 连接三相电能转换器，搭配 Modbus 介面
代码 8021850

转换器可测量有功及无功功能、加总（通过连接模式选择）或分隔输入电能和输出电能。可使用数字输入或 Modbus 命令管理两个电能费率表。它配备 RS485 Modbus 连接埠以传输电量，可以连接螺栓端子、雙 RJ45 連接埠和光纤外通信埠（搭配 OptoProg 光學介面）。可测量三个 DIN 模組。工作時數計：可將電能與相關工作時數數據連接。
