

Product Environmental Profile

Harmony™ 9001K Joystick Operator

Product Environmental Profile - PEP

Product Environmental Profile - PEP

End of life

At end of life, the products in the 9001K Joystick product range have been optimized to decrease the amount of waste and allow recovery of the product components and materials.

This product range contains 2 plastic parts that contain brominated flame retardants that should be separated from the stream of waste so as to optimize end-of-life treatment by special treatments. The location of these components and other recommendations are given in the End of Life Instruction document which is available for this product range.

The recyclability potential of the products has been evaluated using the "ECO DEEE recyclability and recoverability calculation method" (version V1, 20 Sep. 2008 presented to the French Agency for Environment and Energy Management: ADEME).

According to this method, the potential recyclability ratio is 0.137 for the 9001K Joystick product range.
