Application

ÖLFLEX® CHAIN 90 CP are shielded highly-flexible TPU single core cables approved for the European, North American and Canadian market, for permanent flexible use in power chains and fixed installation with narrow bending radii under increased mechanical load conditions. They are also suitable for use in dry, damp or wet areas. These products are suitable for outdoor use if the indicated temperature range is observed. ÖLFLEX® CHAIN 90 CP are increased resistant to oils and at room temperature largely resistant to acids and alkalis. The outer sheath withstands high mechanical stresses, in particular abrasion and dragging. It is also cut proof and resists microbes and hydrolysis. ÖLFLEX® CHAIN 90 CP are especially suitable for increased requirements (Extended Line) in power chains and in permanently moved machine parts. They are suitable for linear, automated movements. The maximum tensile load is 15 N/mm² of conductor cross-section during installation and operation. Compulsory guidance is not permitted. The screening braid protects against interference from electrical fields.

Application range:

Power chains or moving machine parts, for wiring of electric and electronic equipment in switch cabinets, test systems in the automotive industry, vehicles and stationary fuel cell systems. This cable is suitable for torsion application in wind turbines (WTG). The torsional load is limited to applications, as they typically occur in the loop of a wind turbine.
