Safety notes

- Évite tout contact direct avec les sources de lumière : Les câbles à fibres optiques, en particulier ceux qui utilisent des sources lumineuses actives telles que des lasers (par exemple dans les systèmes
- de communication optique), peuvent émettre des rayonnements dangereux qui peuvent endommager les yeux. Veille à ne jamais regarder directement la lumière d'une fibre optique, même si la source lumineuse est invisible à l'œil nu.
- Lors du travail avec des câbles à fibres optiques, en particulier lors de tests ou de travaux avec des lasers, il convient de toujours porter des lunettes de protection qui protègent contre les rayonnements nocifs.
- Lors du branchement et du débranchement, saisissez le câble exclusivement par la fiche et ne tirez pas directement sur le câble.
- Ne pas plier ou écraser : Les câbles à fibres optiques sont sensibles aux contraintes mécaniques.
- Pour protéger les câbles contre les dommages physiques, ils doivent être placés dans des gaines spéciales ou avec des matériaux de protection.
- Maintenir les connecteurs de câbles propres : Les câbles à fibres optiques sont sensibles à la poussière et à la saleté. Même de petites particules sur les connecteurs peuvent fortement nuire à la qualité du signal.
- Les câbles ne doivent pas être utilisés dans des environnements où les températures sont extrêmement élevées ou très basses. Veillez à respecter les indications du produit concernant la température maximale de fonctionnement du câble.
- Vérifiez régulièrement que les câbles ne présentent pas de dommages visibles.
