

nVent ERIFLEX Flexbus System

Rodent and Termite Protection Solution

Introduction

Electrical conductors are installed in a wide variety of environments, with some being more susceptible to pests, rodents, or termites. This is especially true for nVent ERIFLEX Flexbus conductors or cables, which are often laid close to the ground or directly buried in underground conduits or trenches.

Rodents are drawn to insulating materials because of the plasticizers and aromatic odors they contain. Additionally, the color and texture of the cable sheath material can be appealing to them. Termites, on the other hand, live in underground nests deep in the soil. Although their primary diet consists of cellulose from organic waste and plant roots, once these natural sources are depleted, they seek out other manmade sources, such as cables.

When the insulation layer of a cable / Flexbus is chewed through, it can lead to short circuits and potentially cause an electrical fire. Therefore, in areas where there is a risk of pests, rodents, or termites, it is important to consider adding protective barriers or additives to the conductors to prevent damage.

Rodent and Termite Protection Solution for nVent ERIFLEX Flexbus Conductors

A new version of the Flexbus conductors is now available and includes rodent and termite repellent. During the extrusion process, an additive/masterbatch is incorporated into the outer sheath of the Flexbus conductor, ensuring long-lasting effectiveness through the controlled release of active ingredients.

RODENT REPELLENT – HOW IT WORKS

Research has shown that animals are attracted to plastic materials because they look, smell, and taste appealing. Our additive changes this attractiveness in four significant ways:

- When an animal bites into the plastic, they encounter an extremely foul-tasting material
- This unpleasant taste is combined with an extraordinary pungency that causes severe distress to the animal's mucosa, making their mouth, nose, and eyes burn
- Our additive has a distinct odor that animals will now associate with this bad experience, leading to behavior modification and causing animals to avoid these products in the future
- The fear response and unpleasant reaction are also communicated to other animals in the vicinity

TERMITE REPELLENT – HOW IT WORKS

Our Additive for Insects is a highly effective insect repellent masterbatch that, when integrated into a polymer product, provides protection against insect damage. This masterbatch is particularly potent against termites. It acts as a barrier, preventing termites and other agriculturally harmful insects from damaging polymer-based products and the surrounding environment.

Our additive/masterbatch offers several benefits:

- It is **non-toxic, non-hazardous, non-dangerous**, environmentally friendly, and has a low odor
- It complies with **REACH and RoHS** standards, as verified by SGS Testing & Control Services Singapore
- It has been **tested according to the GB/T 34016-2017** Chinese standard for rat and termite proof wires and cables, with tests performed by the China National Center for Quality Supervision and Test of Electric Wire and Cable.
- Its **effectiveness** against insects has been **confirmed** by BAM Germany (Federal Institute for Materials Research & Testing) in accordance with DIN EN 117: Wood preservatives - Determination of toxic values against Reticulitermes species (European termites) (Laboratory method)
- Its **effectiveness** against rodents has been **validated** by Texas A&M University (TAMU) with insulation treated with our Repellent for Rodents

Note: The rodent and termite repellent has not undergone testing according to UL and CSA standards for the North American market.

Rodent and Termite Protection Solution for nVent ERIFLEX Flexbus Conductors

“Where conditions experienced or expected constitute a hazard (AL2), the wiring system shall be selected accordingly or special protective measures shall be adopted”

The IEC 60364: Low-voltage electrical installations – Part 5-52: Selection and erection of electrical equipment – Wiring systems – Chapter 522: Selection and erection of wiring systems in relation to external influences – 522.10: Presence of fauna (AL), specifies:

“Where conditions experienced or expected constitute a hazard (AL2), the wiring system shall be selected accordingly or special protective measures shall be adopted”

The IEC 60721-3-3: Classification of groups of environmental parameters and their severities - Stationary use at weather-protected locations – Chapter 5.4: Biological conditions – Table 3: Classification of biological conditions, **classifies Flexbus conductors with rodent and termite repellent as 3B3 (Presence of rodents and other animals harmful to products, including termites).**

The IEC 60721-3-4: Classification of groups of environmental parameters and their severities - Stationary use at non-weather protected locations – Chapter 5.3 Biological conditions – Table 3: Classification of biological conditions, **classifies Flexbus conductors with rodent and termite repellent as 4B2 (Presence of rodents and other animals harmful to products, including termites).**

HOW TO REQUEST FLEXBUS CONDUCTORS PROTECTED AGAINST RODENT AND TERMITE

Please reach out to your nVent ERIFLEX representative or contact us at ERIFLEX.flexbus@nVent.com for more information or to obtain a quote.

Additionally, you can use our online Flexbus quoting and configurator software. Within this software, select the “Conductor with Rodent and Termite Repellent” version. To request access to this software, please register online: <https://go.nVent.com/FlexbusConfigurator>.

PRODUCT IDENTIFICATION

A Flexbus conductor extruded with the rodent and termite repellent will feature a special marking on the insulation sleeve, and the sleeve color will be dark grey – RAL 7046.
