1. USAGE SCENARIO

Meeting room, hotel, home

2. Description

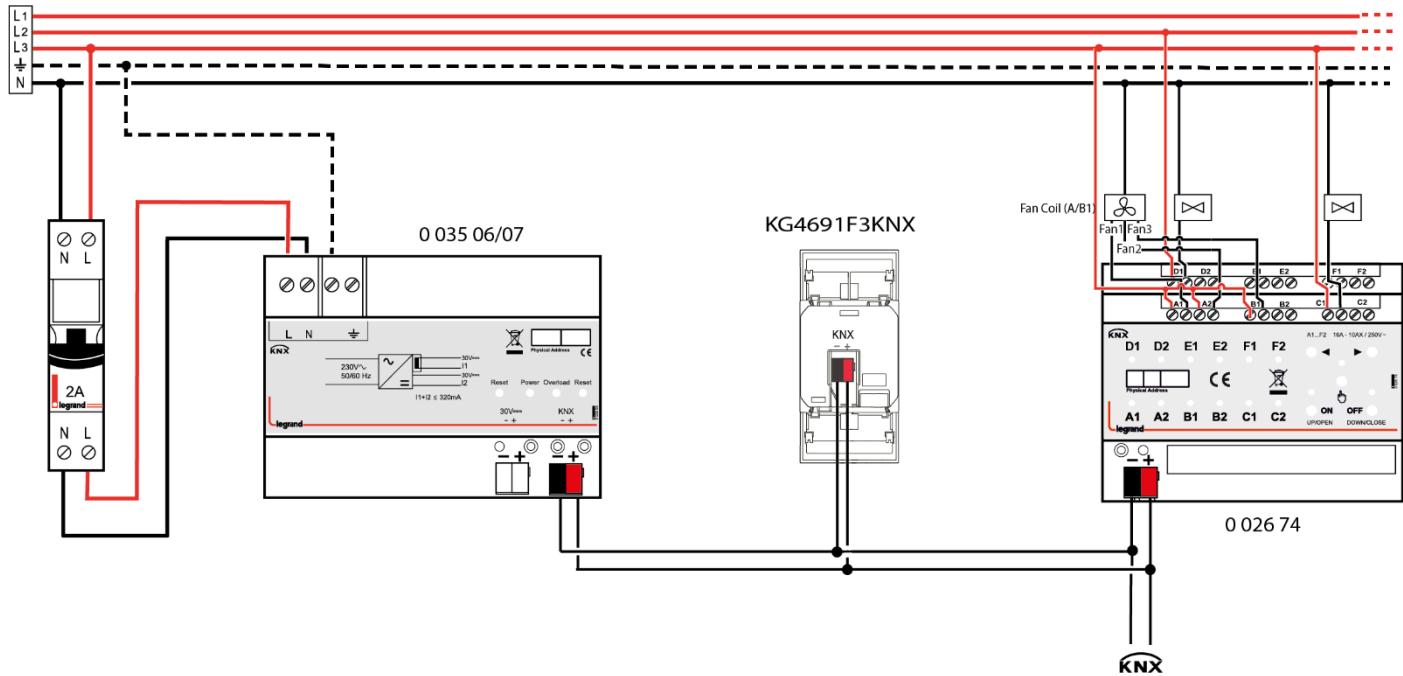

The thermostat combined with an RCU actuator is used to control a fan coil equipped with 4 pipes, 2 points ON/OFF valves and 3 - ON/OFF fan. Automatic change over to switch between Heating/Cooling mode

The system will regulate the temperature of an office around the set point.

Using the thermostat's touch-sensitive buttons, the user can:

- Change the temperature setpoint.
- Adjust the fan speed.

3. WIRING DIAGRAM

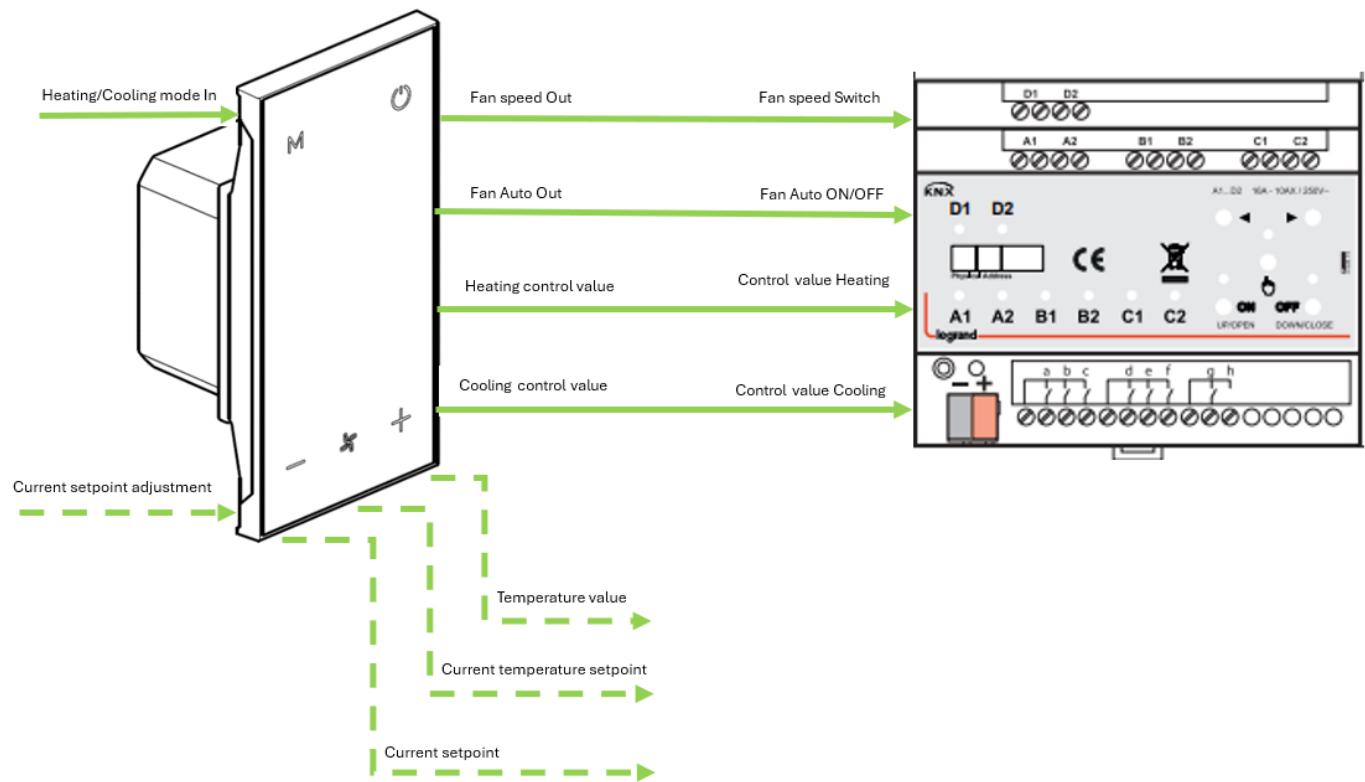

NB:

For more information about wiring each device, refer to the instructions on site.

8. NOTES

The whole HVAC system is managed by thermostat Living Now (heating/cooling regulation, setpoint, manual & automatic ventilation).

The HVAC and FAN valve is connected to controller 0 026 74 (A, B1 and C connector), The room controller 0 026 74 provide ON/OFF to switch or shut valve.

The setpoint value can be altered on thermostat KG4691F3 by touching the buttons "+" and "-".

The fan speed can be altered by touching the button on the bottom of the thermostat. There are 3 manual fan speed levels and an automatic mode run by the thermostat.

Unused actuator outputs can be configured for lighting or roller shutter control.
