Safety caution

- Before use, read carefully through the “Safety caution” section to ensure correct operation.
- The important contents concerned to the safety are described in the “Safety cautions”. Be sure to keep them. For Indications and their meanings, see the following description.

■ Warning Indications on the Air Conditioner Unit

Warning indication	Description
 <div style="border: 1px solid black; padding: 2px;"> WARNING ELECTRICAL SHOCK HAZARD Disconnect all remote electric power supplies </div>	WARNING ELECTRICAL SHOCK HAZARD Disconnect all remote electric power supplies before servicing.
 <div style="border: 1px solid black; padding: 2px;"> WARNING Moving parts. Do not operate unit with grille removed. </div>	WARNING Moving parts. Do not operate unit with grille removed. Stop the unit before the servicing.
 <div style="border: 1px solid black; padding: 2px;"> CAUTION High temperature parts. You might get burned when removing this panel. </div>	CAUTION High temperature parts. You might get burned when removing this panel.
 <div style="border: 1px solid black; padding: 2px;"> CAUTION Do not touch the aluminum fins of the unit. Doing so may result in injury. </div>	CAUTION Do not touch the aluminium fins of the unit. Doing so may result in injury.
 <div style="border: 1px solid black; padding: 2px;"> CAUTION BURST HAZARD Open the service valves before the operation, </div>	CAUTION BURST HAZARD Open the service valves before the operation, otherwise there might be the burst.
 <div style="border: 1px solid black; padding: 2px;"> CAUTION Do not climb onto the fan guard. Doing so may result in </div>	CAUTION Do not climb onto the fan guard. Doing so may result in injury.

■ Explanation of indications

WARNING

Indicates possibilities that a death or serious injury of personnel is caused by an incorrect handling.

CAUTION

Indicates contents that an injury (*1) or property damage (*2) only may be caused when an incorrect work has been executed.

*1: "Injury" means a hurt, a burn, or an electric shock which does not require hospitalization or a long-term going to the hospital.

*2: "Property damage means an enlarged damage concerned to property, or breakage of materials.

- After installation work has finished, check there is no trouble by a test operation, and explain using method and maintenance method to the customers based on the Owner's Manual.
Please ask the customers to keep this Installation Manual together with the Owner's Manual.

WARNING

Ask a shop or a professional dealer to install the air conditioner.

If you will install by yourself, a fire, an electric shock, or water leak is caused.

Take measures so that the refrigerant does not exceed the limit concentration even if it leaks when installing the air conditioner in a small room.

For the measures not to exceed the limit of concentration, contact the dealer. If the refrigerant leaks and it exceeds the limit of concentration, an accident of oxygen shortage is caused.

Install the air conditioner at a place which is satisfactorily bearable to weight.

If strength is insufficient, the unit may fall down resulting in human injury.

Perform a specified installation work against a strong wind such as typhoon or earthquake.

If the air conditioner is imperfectly installed, an accident by falling or dropping may be caused.

If refrigerant gas leaks during installation work, ventilate the room.

If the leaked refrigerant gas approaches to fire, noxious gas may generate.

After installation work, confirm that refrigerant gas does not leak.

If refrigerant gas leaks in the room, and approaches to fire such as fan heater, stove or kitchen range, generation of noxious gas may be caused.

Never recover refrigerant in the outdoor unit.

Be sure to use a refrigerant recovery device to recover refrigerant in reinstallation or repair work.

Recovery of refrigerant in the outdoor unit is unavailable; otherwise a serious accident such as crack or human injury is caused.

A person qualified for the electric work should deal with the electric construction conforming to the regulations of the local electric company and the Installation Manual. Be sure to use the exclusive circuit.

If there is capacity shortage of the power supply circuit or incomplete installation, a fire or an electric shock is caused.

For cabling, use the specified cables and connect them securely so that external force of cable does not transmit to the terminal connecting section.

If connection or fixing is incomplete, a fire, etc. may be caused.

Be sure to connect earth wire.

Do not connect earth wire to gas pipe, water pipe, lightning rod, nor earth wire of telephone.

If grounding is incomplete, an electric shock is caused.

CAUTION

Do not install the air conditioner at a place where combustible gas may leak.

If gas leaks and is collected at surrounding the unit, the production of fire may be caused.

Be sure to attach an earth leakage breaker; otherwise an electric shock may be caused.

Using a torque wrench, tighten the flare nut in the specified method.

If the flare nut is exceedingly tightened, the flare nut is broken and a refrigerant leakage may be caused after a long time has passed.

WARNINGS ON REFRIGERANT LEAKAGE

Check of Concentration Limit

The room in which the air conditioner is to be installed requires a design that in the event of refrigerant gas leaking out, its concentration will not exceed a set limit.

The refrigerant R410A which is used in the air conditioner is safe, without the toxicity or combustibility of ammonia, and is not restricted by laws to be imposed which protect the ozone layer. However, since it contains more than air, it poses the risk of suffocation if its concentration should rise excessively.

Suffocation from leakage of R410A is almost nonexistent. With the recent increase in the number of high concentration buildings, however, the installation of multi air conditioner systems is on the increase because of the need for effective use of floor space, individual control, energy conservation by curtailing heat and carrying power etc.

Most importantly, the multi air conditioner system is able to replenish a large amount of refrigerant compared with conventional individual air conditioners. If a single unit of the multi conditioner system is to be installed in a small room, select a suitable model and installation procedure so that if the refrigerant accidentally leaks out, its concentration does not reach the limit (and in the event of an emergency, measures can be made before injury can occur).

In a room where the concentration may exceed the limit, create an opening with adjacent rooms, or install mechanical ventilation combined with a gas leak detection device.

The concentration is as given below.

Total amount of refrigerant (kg)

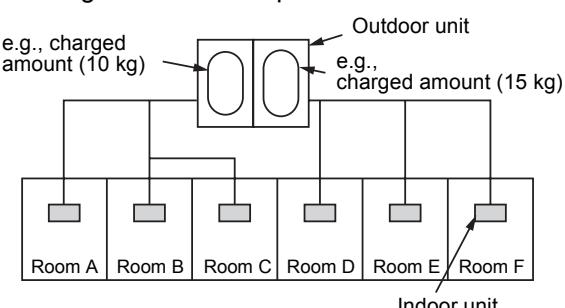

$$\frac{\text{Min. volume of the indoor unit installed room (m}^3\text{)}}{\leq \text{Concentration limit (kg/m}^3\text{)}}$$

Concentration limit

Compliance to the local applicable regulations and standards for the concentration limit is required.

NOTE 1:

If there are 2 or more refrigerating systems in a single refrigerating device, the amounts of refrigerant should be as charged in each independent device.

For the amount of charge in this example:

The possible amount of leaked refrigerant gas in rooms A, B and C is 10 kg.

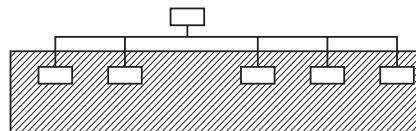

The possible amount of leaked refrigerant gas in rooms D, E and F is 15 kg.

Important

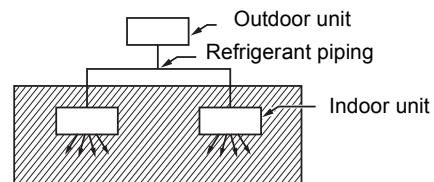

NOTE 2:

The standards for minimum room volume are as follows.

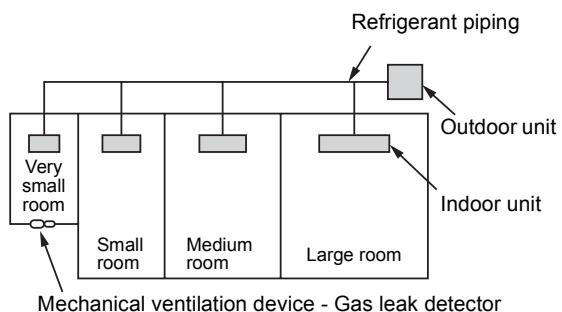

- (1) No partition (shaded portion)

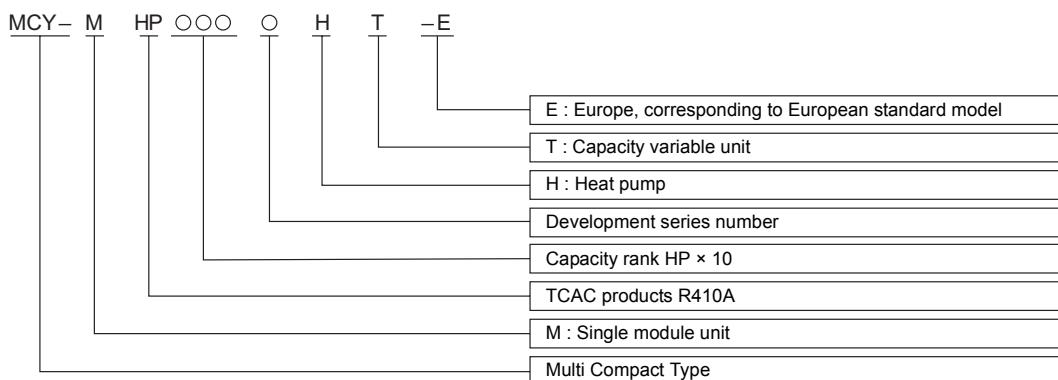

- (2) When there is an effective opening with the adjacent room for ventilation of leaking refrigerant gas (opening without a door, or an opening 0.15 % or larger than the respective floor spaces at the top or bottom of the door).

- (3) If an indoor unit is installed in each partitioned room and the refrigerant tubing is interconnected, the smallest room of course becomes the object. But when a mechanical ventilation is installed interlocked with a gas leakage detector in the smallest room where the density limit is exceeded, the volume of the next smallest room becomes the object.

2-1. Selection flow chart

2-2. Combination conditions for indoor unit and outdoor unit

Indoor unit can connect 80 % to 130 % of Outdoor unit capacity.

2-2-1. For indoor unit, the capacity code is decided for each capacity rank.

Capacity rank type		005	007	009	012	015	018	024	027	030	036	048
Capacity code	Equivalent to HP	0.6	0.8	1.0	1.25	1.7	2.0	2.5	3.0	3.2	4.0	5.0

NOTE:

Capacity rank : Correspondence to Btu/h. Capacity code : Correspondence to Horsepower.

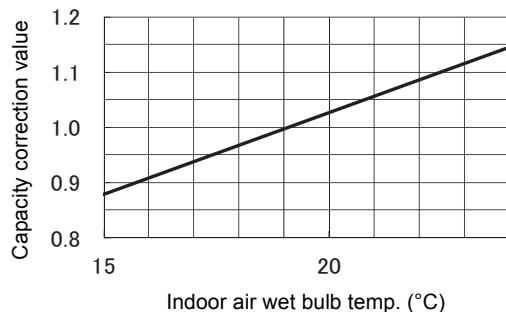

2-2-2. For outdoor unit, maximum No. of connectable indoor units and total capacity code of indoor units are decided.

Outdoor unit	Capacity code of outdoor unit	No. of connectable indoor units	Total capacity code of indoor units
MCY-MHP0406HT-E	4	2 to 8	3.2 to 5.2
MCY-MHP0506HT-E1	5	2 to 10	4.0 to 6.5

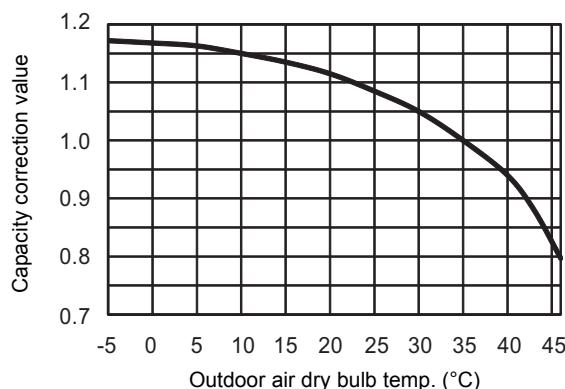

2-3. Cooling / heating capacity characteristics

2-3-1. Correction charts for cooling capacity calculation

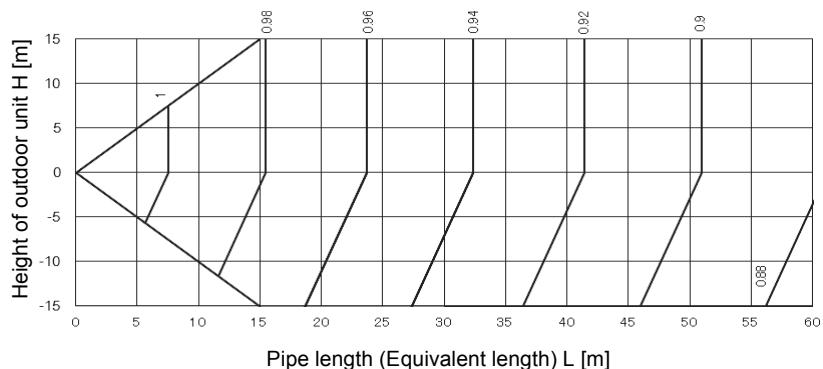

[1] Capacity correction value vs. indoor air wet bulb temperature

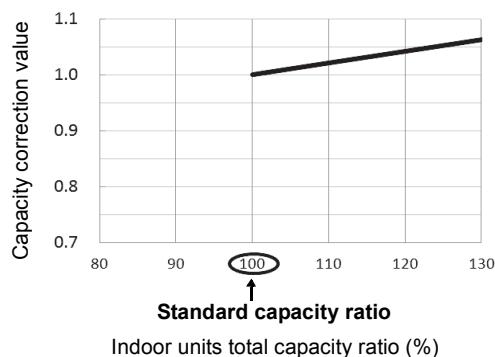

[2] Capacity correction value vs. outdoor air dry bulb temperature

[3] Capacity correction value vs. connecting pipe length and lift difference between indoor and outdoor units

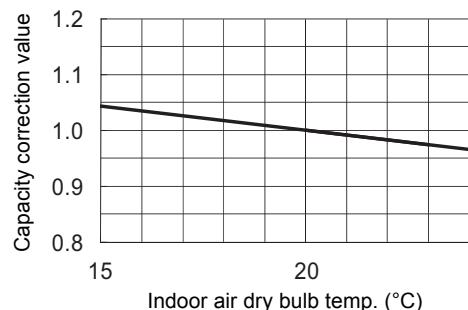

[4]* Correction of outdoor unit diversity

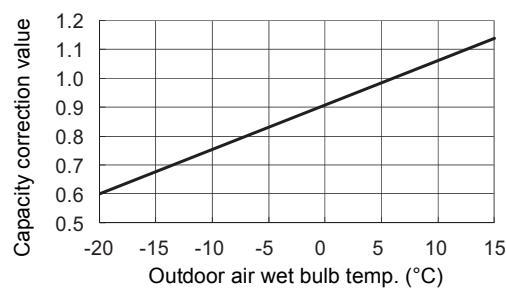

* : Coefficient to use for correction of outdoor unit capacity when total capacity of the indoor units are not equal to the outdoor unit capacity.

2-3-2. Correction charts for heating capacity calculation

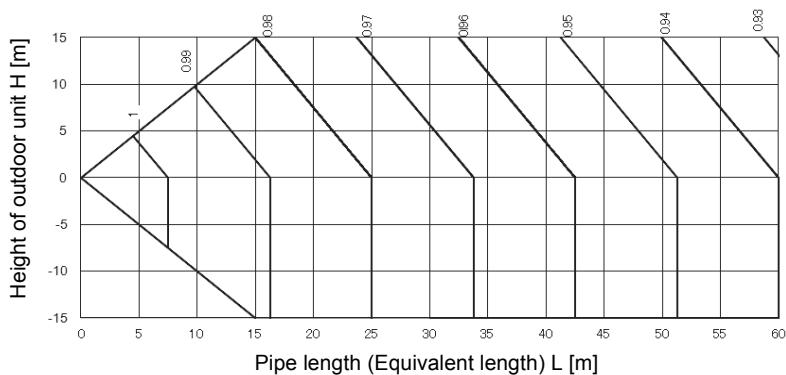

[1] Capacity correction value vs. indoor air dry bulb temperature

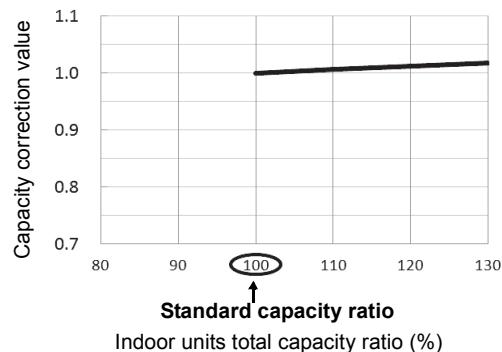

[2] Capacity correction value vs. outdoor air wet bulb temperature

[3] Capacity correction value vs. connecting pipe length and lift difference between indoor and outdoor units

[4]* Correction of outdoor unit diversity

* : Coefficient to use for correction of outdoor unit capacity when total capacity of the indoor units are not equal to the outdoor unit capacity.

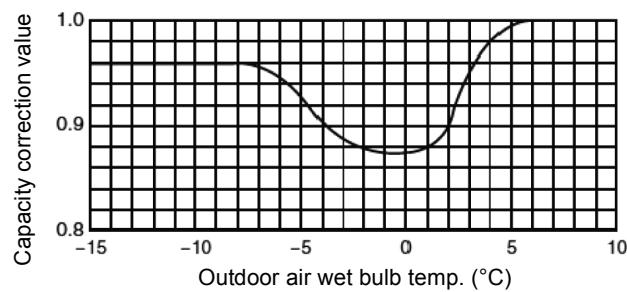

2-3-3. Capacity correction in case of frost on the outdoor heat exchanger in heating

Correct the heating capacity when frost was found on the outdoor heat exchanger.

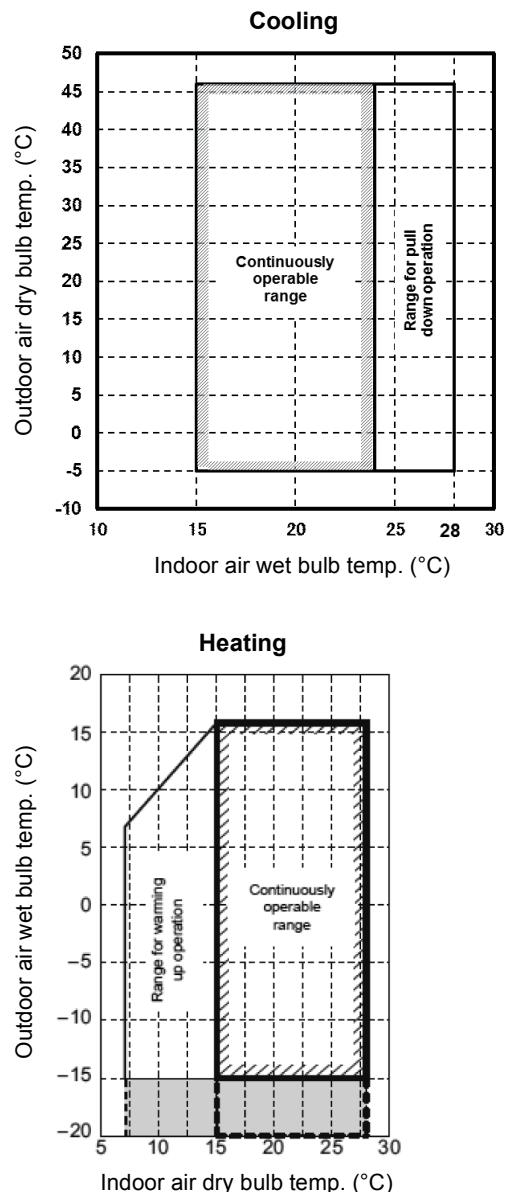

Heating capacity = Capacity after correction of outdoor unit x Correction value of capacity resulted from frost

(Capacity after correction of outdoor unit: Heating capacity calculated in the above item 2.)

[5] capacity correction in case of frost on the outdoor heat exchanger

2-4. Operational temperature range

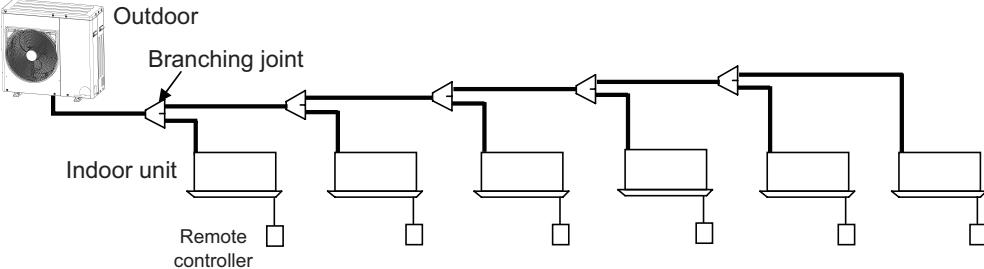

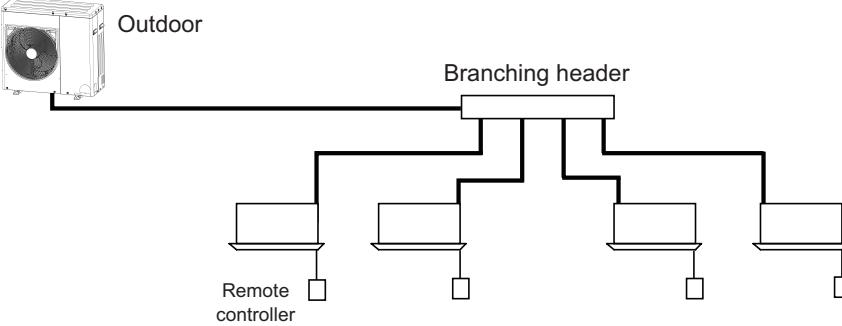

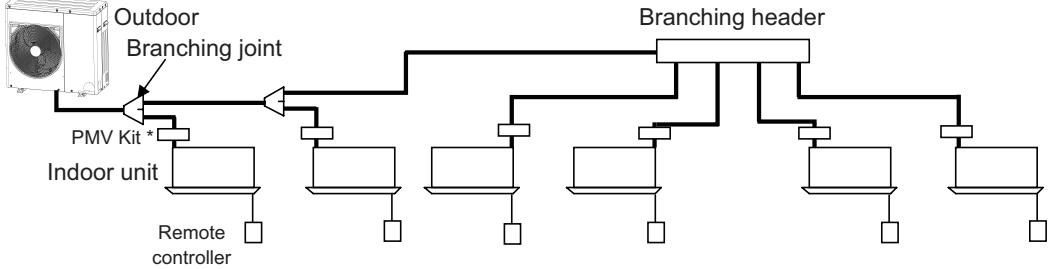

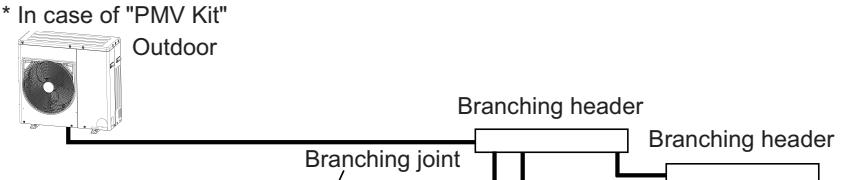

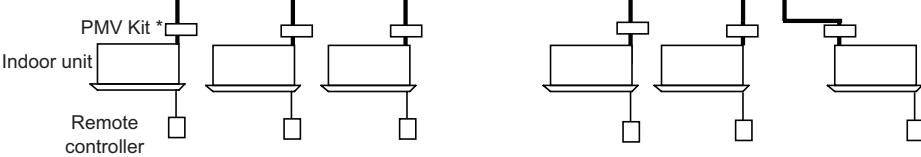

The unit will operate down to an outdoor temperature of -20 °C, however considerable performance decrease will be expected below -15 °C. Therefore please consider installation location/surroundings and system design when expected to operate between -15 °C and -20 °C.

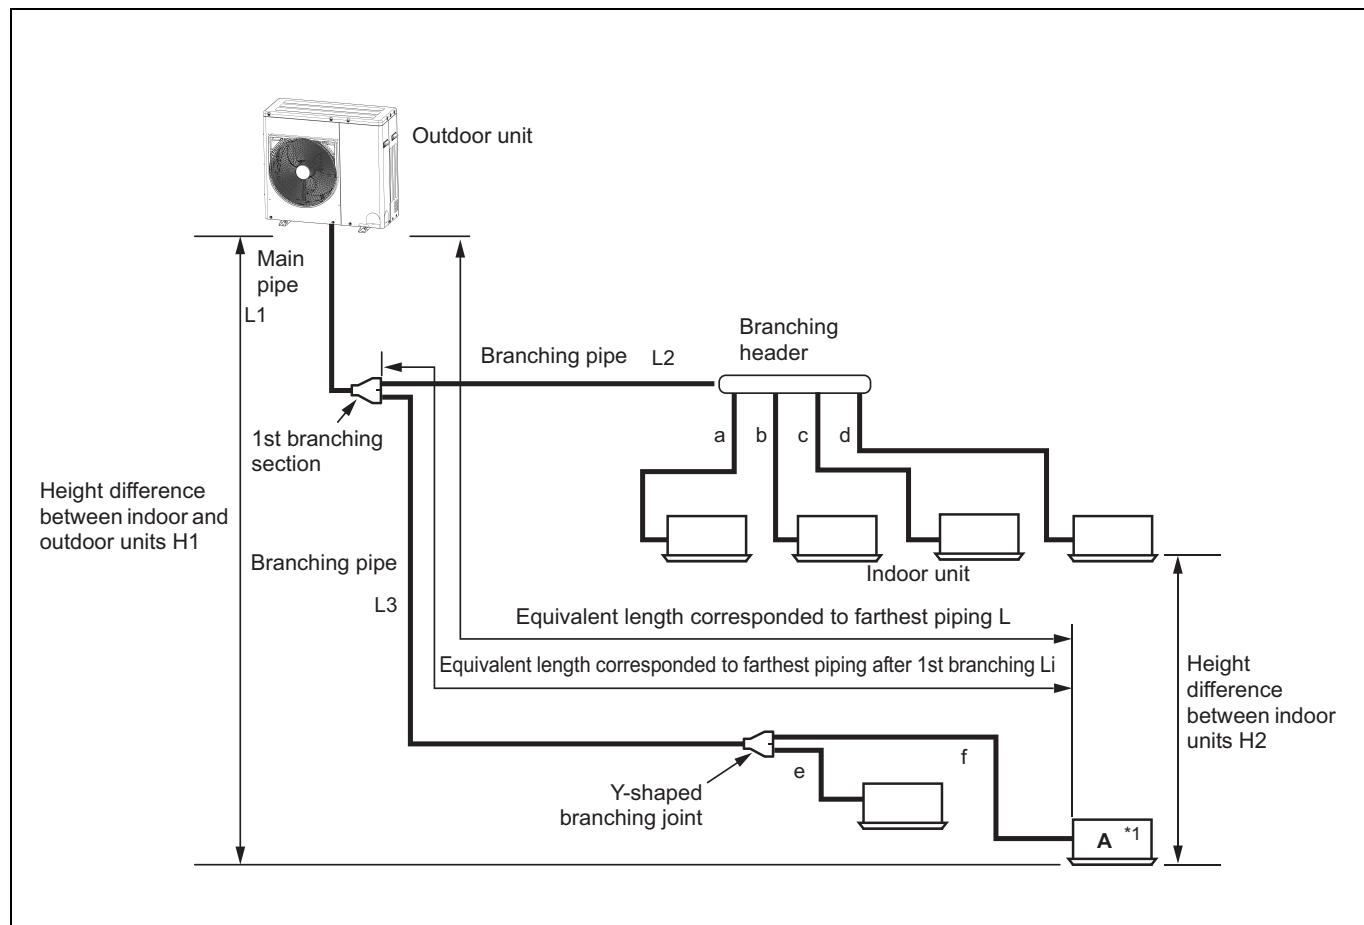

3-1. Free branching system

- [1] Line branching system
- [2] Header branching system
- [3] Header branching system after line branching
- [4] Line branching system after header branching
- [5] Header branching system after header branching

The above five branching systems enable to dramatically increase the flexibility of refrigerant piping design.

Line branching system	
Header branching system	
Header branching system	* In case of "PMV Kit" 
Line branching system after header branching	* In case of "PMV Kit" 
Header branching system after header branching	

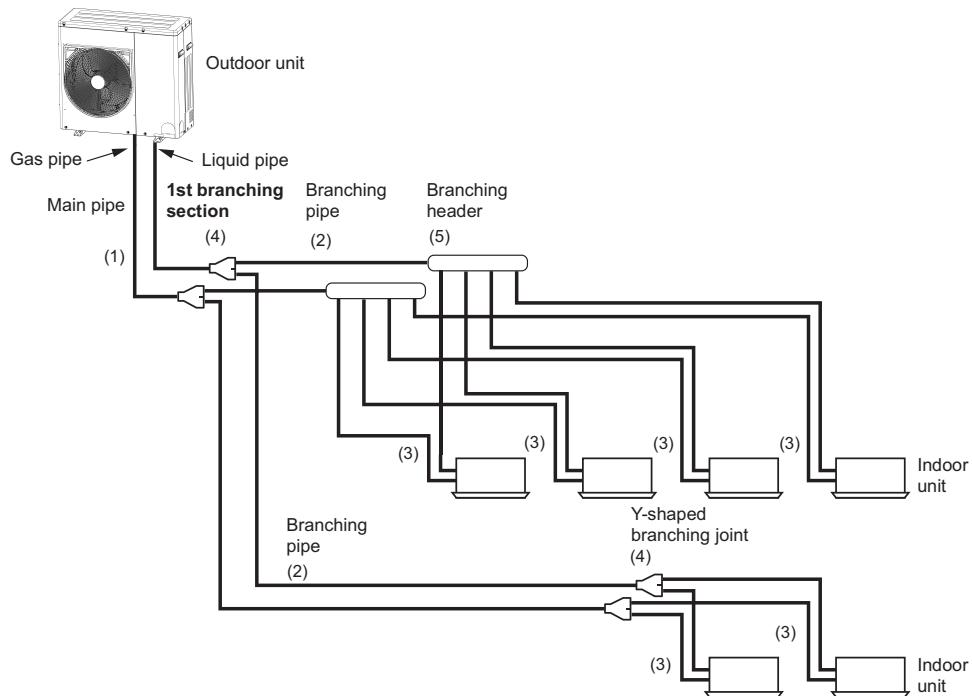

3-2. Allowable length / height difference of refrigerant piping

		Allowable value		Piping section
Pipe Length	Total extension of pipe (Liquid pipe, real length)	90 m		$L_1 + L_2 + L_3 + a + b + c + d + e + f$
	Furthest piping length L (*1)	Real length	50 m	$L_1 + L_3 + f$
		Equivalent length	60 m	
	Max. equivalent length of main pipe	30 m		L_1
Height Difference	Max. equivalent length of furthest piping from 1st branching Li (*1)	20 m		$L_3 + f$
	Max. real length of indoor unit connecting pipe	10 m		a, b, c, d, e, f
	Height between indoor and outdoor units $H1$	Upper outdoor unit	15 m	—
		Lower outdoor unit	15 m	—
	Height between indoor units $H2$	10 m		—

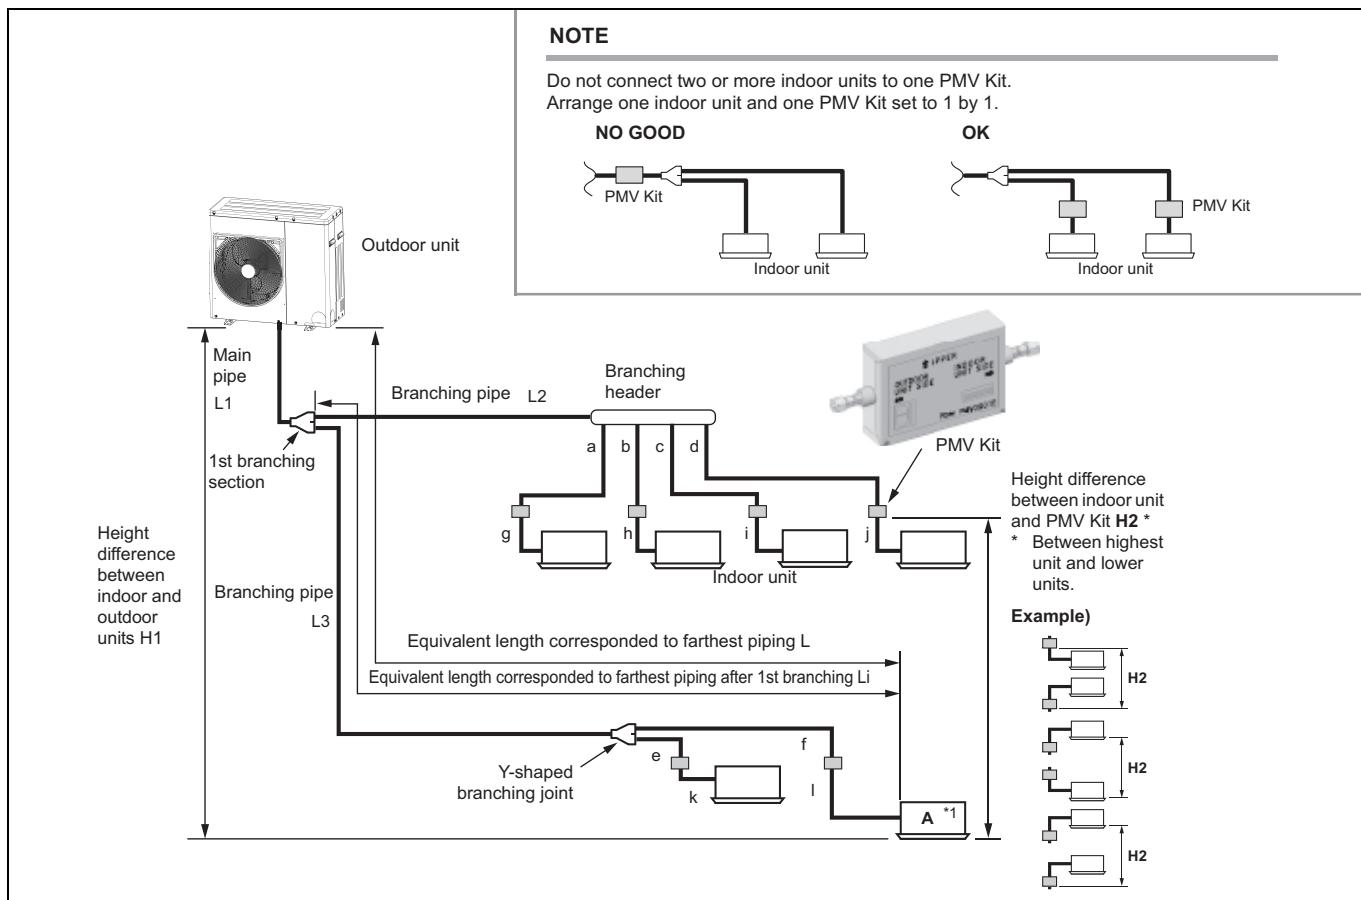

*1 Furthest indoor unit from 1st branch to be named "A"

3-3. Selection of refrigerant piping

No.	Piping parts	Name	Selection of pipe size	Remarks																
(1)	Outdoor unit ↓ 1st branching section	Main pipe	Size of main pipe <table border="1"> <thead> <tr> <th>Outdoor unit capacity type</th> <th>Gas pipe</th> <th>Liquid pipe</th> </tr> </thead> <tbody> <tr> <td>0406 type</td> <td>15.9</td> <td>9.5</td> </tr> <tr> <td>0506 type</td> <td>15.9</td> <td>9.5</td> </tr> </tbody> </table>	Outdoor unit capacity type	Gas pipe	Liquid pipe	0406 type	15.9	9.5	0506 type	15.9	9.5	Same as connecting pipe size of the outdoor unit.							
Outdoor unit capacity type	Gas pipe	Liquid pipe

* PMV kit can be connected less than 027 type FCU.

3-6. Charging requirement with additional refrigerant

After finishing vacuuming, exchange the vacuum pump with a refrigerant canister and start additional charging of refrigerant.

Refrigerant amount charged in factory

Outdoor unit type	MHP0406	MHP0506
Charging amount (kg)	3.3	3.3

Calculation of additional refrigerant charge amount

Refrigerant charge amount factory default does not include the refrigerant for pipes at the local site.

For refrigerant to be charged in pipes at the local site, calculate the amount and charge it additionally.

NOTE

When the additional refrigerant amount indicates minus as the result of calculation, it is not necessary to subtract any refrigerant.

Calculating formula

$$\text{Additional refrigerant charge amount at local site (kg)} = \text{Real length of liquid pipe} \times \text{Additional refrigerant charge amount per 1 m liquid pipe (Table 1)} + \text{Corrective amount of refrigerant depending on the indoor units (Table 2)} + \text{Compensation by outdoor HP (Table 3)}$$

Table 1

Liquid pipe diameter (mm)	6.4	9.5
Additional refrigerant amount /1 m liquid pipe (kg/m)	0.025	0.055

Table2

4-1. General

- The appliance shall be installed in accordance with national wiring regulations.
Capacity shortages of the power circuit or an incomplete installation may cause an electric shock or fire.
- Perform wiring of power supply complying with the rules and regulations of the local electric company.
- Never connect AC voltage power to the control wiring terminal block (U1,U2,U3,U4); otherwise the unit may break down.
- Be sure that electric wiring does not come into contact with high-temperature parts of piping; otherwise the coating of cables may melt and cause an accident.
- Locate wiring system for the control and refrigerant piping system in the same line.
- Do not turn on the power supply of the indoor units until vacuuming of the refrigerant pipe has finished.
- For the wiring of power to indoor units and that between indoor and outdoor units, follow the instructions in the installation manual of each indoor unit.

4-2. Electrical wiring design

Determine the wire size for the indoor unit according to the number of connected indoor units downstream.

4-3. Outdoor unit power supply

Electrical characteristics

Model name	Normal Voltage (V-Ph-Hz)	Voltage Range		Compressor	Fan Motor	Power Supply	
		Min	Max	kW	kW	MCA	MOCP
MCY-MHP0406HT-E	220 - 1 - 50	198	242	3.75	0.100 × 1	26.5	32.0
MCY-MHP0506HT-E1	220 - 1 - 50	198	242	3.75	0.100 × 1	28.0	32.0

MCA : Maximum Circuit Amps

MOCP : Maximum Overcurrent Protection (Amps)

4-4. Indoor unit power supply

For Indoor Unit power supply (Must be independent from the outdoor unit power supply)

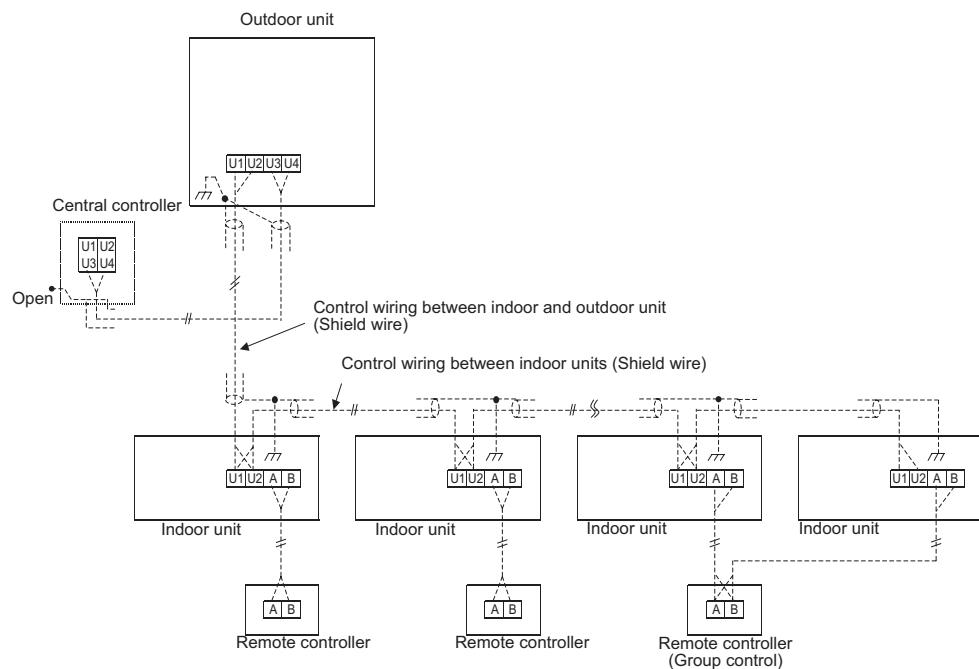

Model	Item	Power supply wiring		Field fuse
		Wire size		
All models of indoor units		2.0 mm ² (AWG#14) Max.20 m	3.5 mm ² (AWG#12) Max.50 m	15 A

NOTE:

The above connecting lengths stated in the table indicate the length from the isolator to the outdoor unit. When the power supply of the indoor units are connected in parallel, it is assumed that no more than a 2 % voltage drop will occur.
If the connecting length is to exceed the stated lengths, select a suitable wire in accordance with the local wiring standards.

4-5. Design of control wiring

4-5-1. Summary of control wiring

Control wiring and central control wiring use 2-core non-polarity wires.

Use 2-core shield wires to prevent noise trouble.

In this case, for the system grounding, close (connect) the end of shield wires, and isolate the end of terminal.

Use 2-core non-polarity wire for remote controller. (A, B terminals)

Use 2-core non-polarity wire for wiring of group control. (A, B terminals)

4-5-2. Restriction of control wiring

Keep the rule of below tables about size and length of Control wiring.

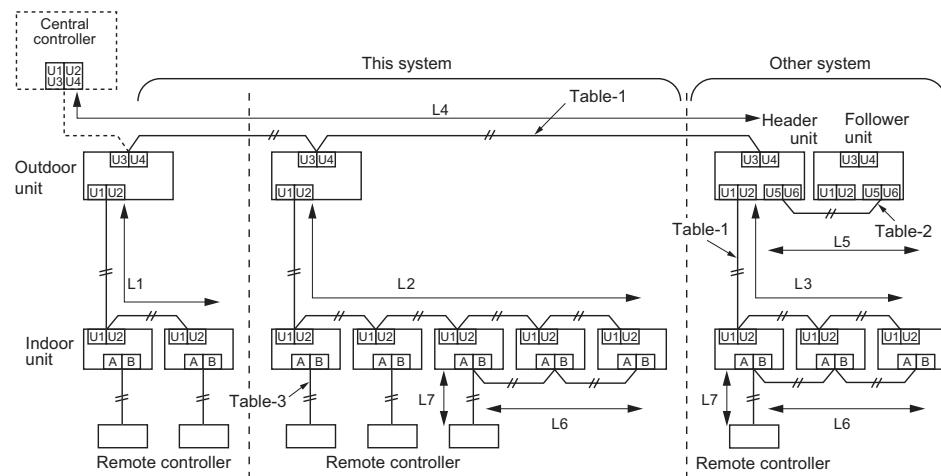

Table-1 Control wiring between indoor and outdoor units (L1, L2, L3), Central control wiring (L4)

Wiring	2-core, non-polarity
Type	Shield wire
Size/Length ^{*1}	1.25 mm ² : Up to 1000 m 2.0 mm ² : Up to 2000 m

(*1): Total of control wiring length for all refrigerant circuits (L1 + L2 + L3 + L4)

Table-2 Control wiring between outdoor units (L5) (Other system)

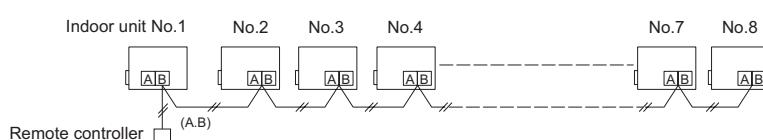

Wiring	2-core, non-polarity
Type	Shield wire
Size/Length	1.25 mm ² to 2.0 mm ² Up to 100 m (L5)

Table-3 Remote controller wiring (L6, L7)

Wire	2-core
Size	0.5 mm ² to 2.0 mm ²
Length	Up to 500 m (L6 + L7) Up to 400 m with of wireless remote controller in group control. Up to 200 m total length of control wiring between indoor units (L6)

4-5-3. Group control through a remote controller

Group control of multiple indoor units (8 units) through a single remote controller

5-1. Specifications

Outdoor unit model name				MCY-MHP0406HT-E	MCY-MHP0506HT-E1
Outdoor unit type				Inverter	Inverter
Capacity code	HP			4	5
Cooling Capacity (*1)	kW			12.1	14.0
Heating Capacity (*1)	kW			12.5	16.0
Electrical characteristics (Nominal) (*1)	Power supply		(*2)	1phase 50Hz 220 / 230 / 240V 1phase 60Hz 220V	1phase 50Hz 220 / 230 / 240V 1phase 60Hz 220V
	Cooling	Running current	A	14.4/13.8/13.2	20.8/19.9/19.0
		Power consumption	kW	3.24	4.34
		Power factor	%	94	95
	EER			3.73	3.23
	Heating	Running current	A	13.4/12.8/12.3	19.1/18.3/17.5
		Power consumption	kW	2.83	4.00
		Power factor	%	93	95
		COP		4.42	4.00
	Starting Current		A	Soft start	Soft start
Dimension	Unit	Height	mm	910	910
		Width	mm	990	990
		Depth	mm	390	390
	Packing	Height	mm	1,024	1,024
		Width	mm	1,102	1,102
		Depth	mm	552	552
Total Weight	Unit	kg		100	100
	Packed unit	kg		108	108
Appearance (Color)				Silky shade (Munsell 1Y8.5/0.5)	Silky shade (Munsell 1Y8.5/0.5)
Compressor	Type			Hermetic twin rotary compressor	Hermetic twin rotary compressor
	Motor output	kW		3.75	3.75
Fan unit	Fan			Propeller fan (Quantity 1)	Propeller fan (Quantity 1)
	Motor output	W		100	100
	Air volume	m³/h		4,020	4,260
Heat exchanger				Finned tube	Finned tube
Refrigerant R410A (Charged refrigerant amount (kg))				(*3)	3.3
High-pressure switch				MPa	ON:4.15, OFF:3.20
Protective devices					(*4)
Electrical specifications	Unit	MCA (*5)	A	26.5	28.0
		MOCP (*6)	A	32.0	32.0
Refrigerant piping	Connecting port diameter	Gas side (main pipe)	mm	15.9	15.9
		Liquid side (main pipe)	mm	9.5	9.5
	Connecting method	Gas side		Flare	Flare
		Liquid side		Flare	Flare
Max. No. of connected indoor units				8	10
Sound pressure level	Cooling	dB(A)		54	54
	Heating	dB(A)		57	58
Operation temperature range	Cooling	CDB		-5 to 46	-5 to 46
	Heating	CWB		-20 to 15	-20 to 15

(*1) Rated conditions Cooling : Indoor 27 degC Dry Bulb / 19 degC Wet Bulb , Outdoor 35 degC Dry Bulb.
Heating : Indoor 20 degC Dry Bulb, Outdoor 7 degC Dry Bulb / 6 degC WetBulb.

The standard pipe means that equivalent piping length of 7.5m and standard 0m piping height difference.

(*2) The source voltage must not fluctuate more than ±10%.

(*3) The amount dose not consider extra piping length and indoor unit type.

Refrigerant must be added on site in accordance with the actual piping length and indoor unit type.

(*4) Discharge temp. sensor / Suction temp. sensor / High-pressure sensor

Low-pressure sensor / High-pressure switch / Compressor case thermostat / PC board fuse

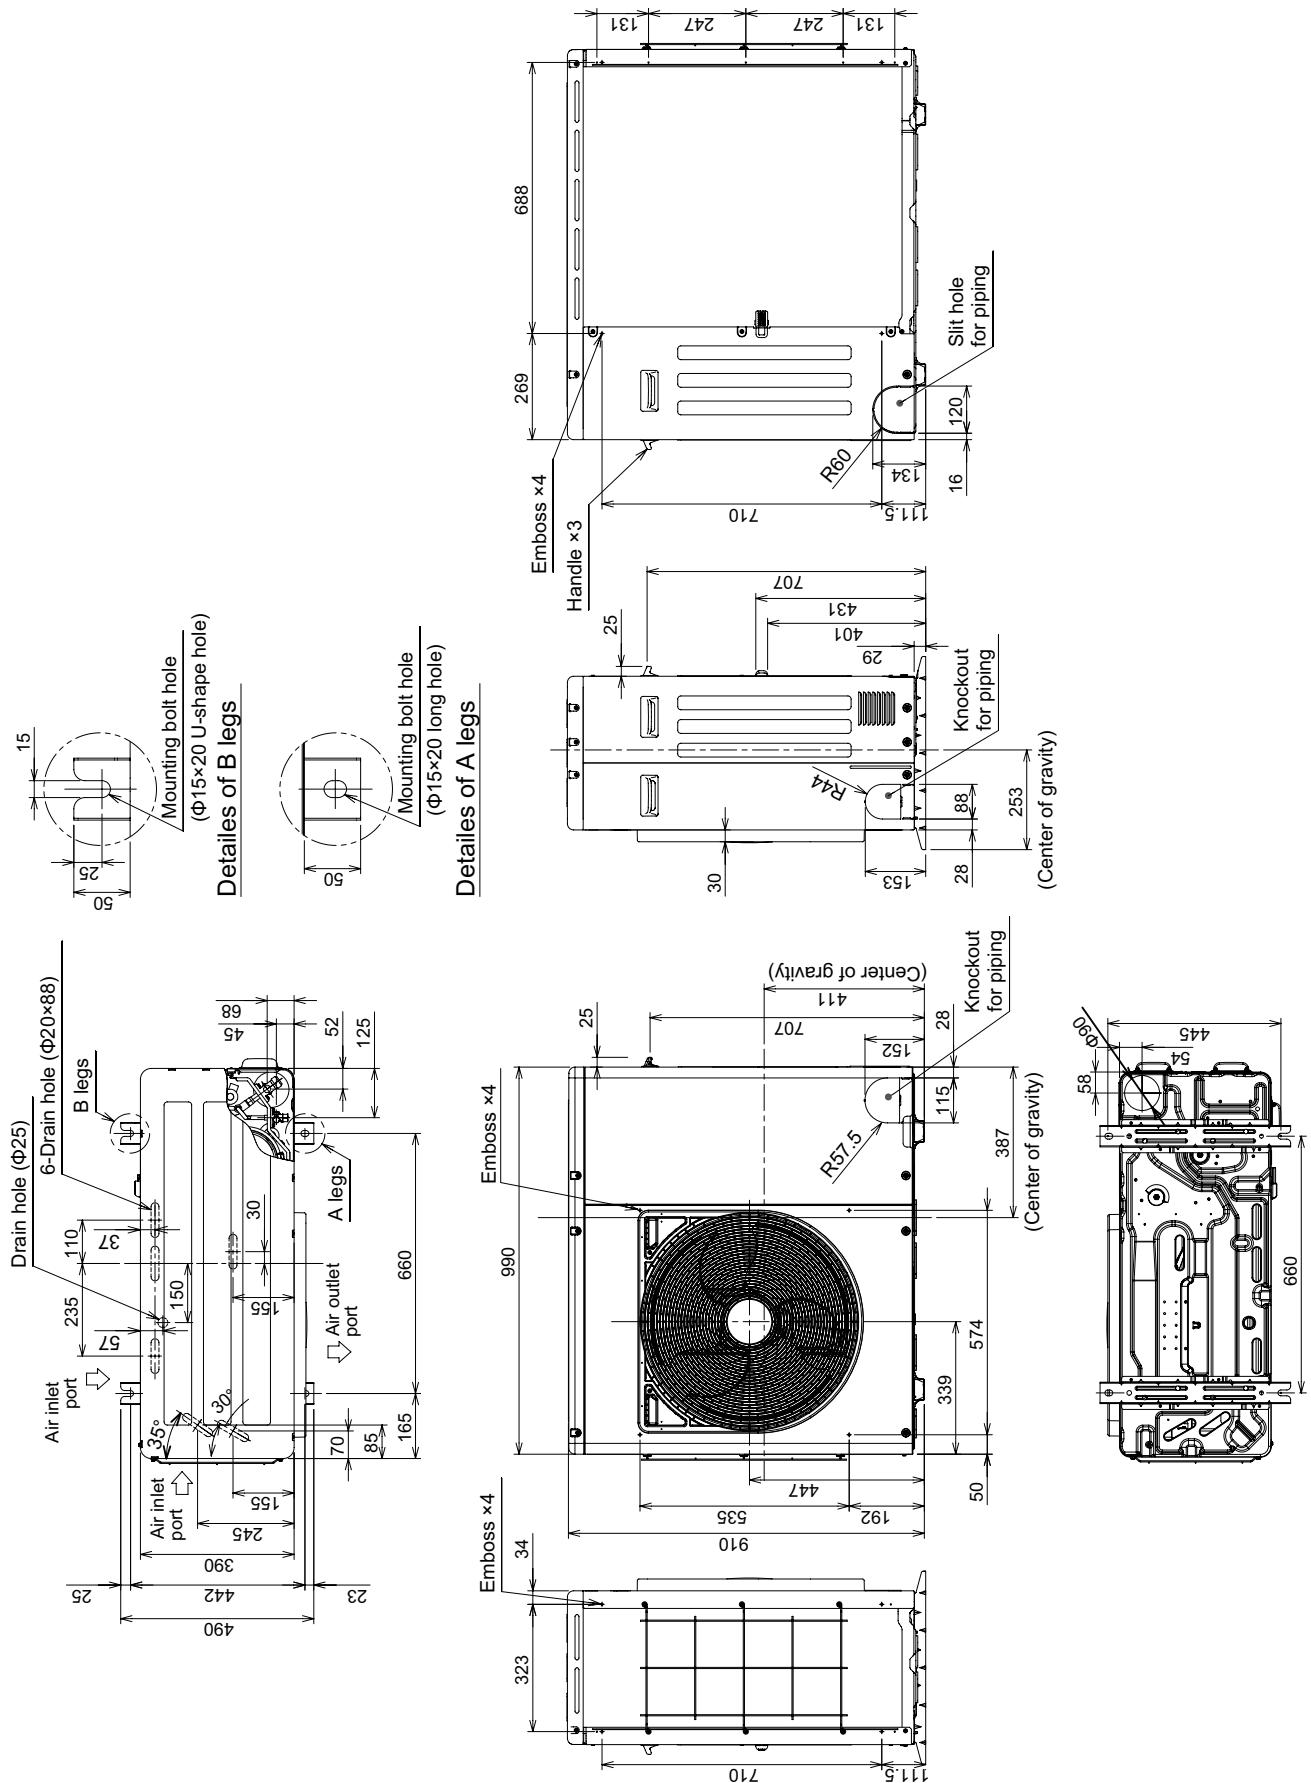

(*5) Select wire size base on the larger value of MCA.

MCA : Minimum Circuit Amps

(*6) MOCP: Maximum overcurrent protection (Amps)

Application		[3] Operation mode selection control																									
▼ Function The heating/cooling mode of the system can be selected by connecting to the interface PCB of outdoor units.																											
																											
* Installation the optional PCB in the interface board of the outdoor unit.																											
SW1: Cooling mode specified input switch		Input Signal																									
Cooling (SW1) Heating (SW2)		Operation: Selected operation mode																									
ON OFF		Cooling operation only																									
OFF ON		Heating operation only																									
OFF OFF		Normal operation																									
Each terminal should be connected to dry contact.																											
Indoor unit operation intervention function																											
The statuses of indoor units operating in a mode different from the selected operation mode can be changed by changing the status of a jumper wire (J01) provided on the interface P.C. board of outdoor unit.																											
Jumper wire		Description of intervention																									
J01 connected (factory default)		All indoor units operating in a mode different from the selected operation mode (prohibited-mode indoor units) become non-priority units (thermostat OFF).																									
		The display “(operation ready)” appears on the remote controller of prohibited-mode indoor units.																									
J01 cut		The selected operation mode is imposed on all indoor units operating in a different mode.

All indoor unit operation

5 Outdoor unit

5-9. Sound pressure level data

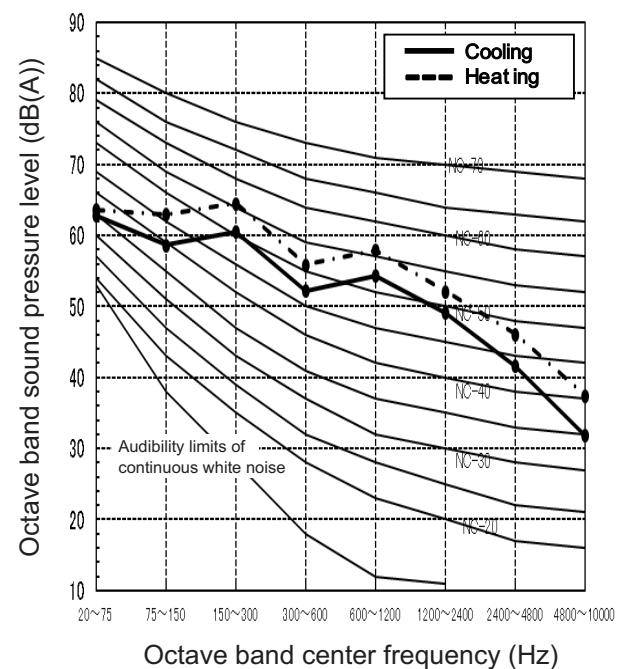

MCY-MHP0406HT-E

Sound pressure level (dB(A))	Cooling	Heating
	54	57

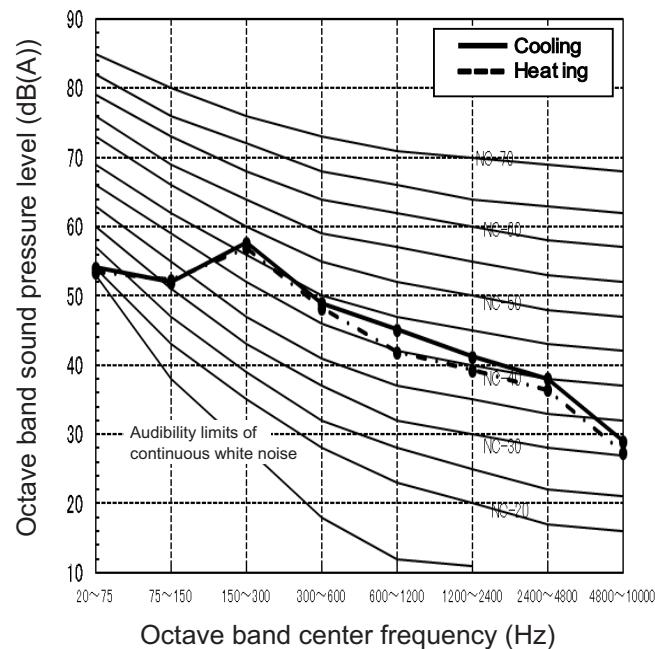

MCY-MHP0506HT-E1

Sound pressure level (dB(A))	Cooling	Heating
	54	58

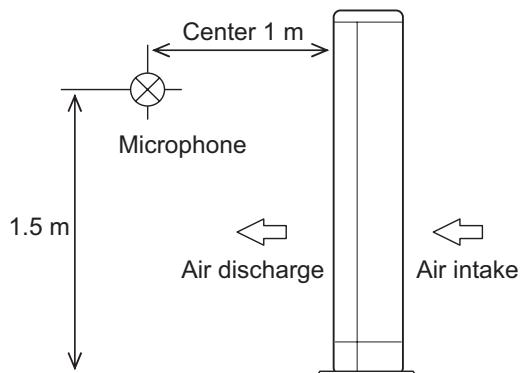

Night operation (sound reduction) control

Sound pressure level (dB(A))	Cooling	Heating
	50	50

[Measuring location]

[Conditions]

Cooling

Outdoor temperature: 35 °CDB, 24 °CWB
Indoor air temperature: 27 °CDB, 19 °CWB

Heating

Outdoor temperature: 7 °CDB, 6 °CWB
Indoor air temperature: 20 °CDB

This sound pressure level are measured in an anechoic chamber in accordance.

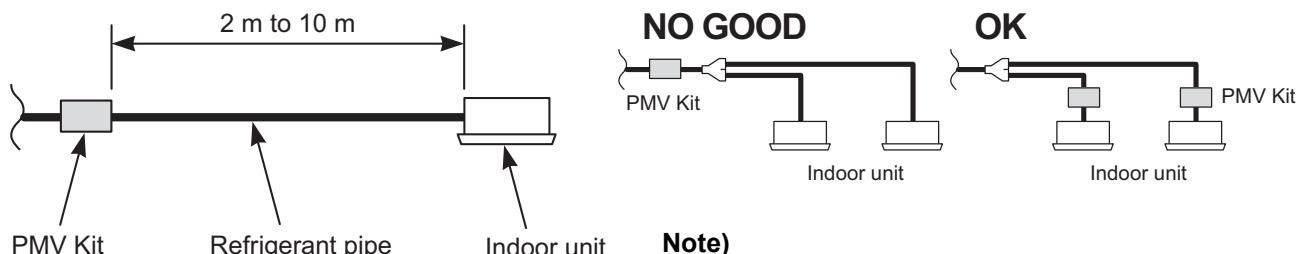

5-10. PMV Kit

PMV-Kit (RBM-PMV0363E, RBM-PMV0903E) shall be required for quieter place application as an optional to reduce refrigerant sound especially in oil retrieval control or in transient operation as start up.

5-10-1. Selection

Model name	Indoor unit capacity type	Diameter of refrigerant pipe
RBM-PMV0363E	005 to 012 type	ø6.4
RBM-PMV0903E	015 to 018 type	ø6.4
	024 to 027 type	ø9.5

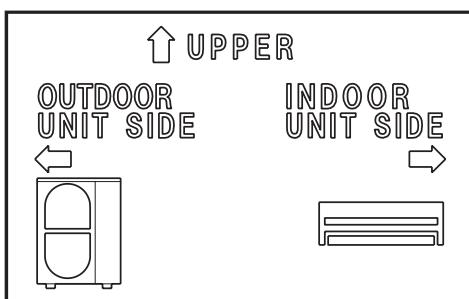

Allowable length of refrigerant piping

Note)

Do not connect two or more indoor units to one PMV Kit.
Arrange one indoor unit and one PMV Kit set to 1 by 1.

Label

- Connecting direction of refrigerant pipe
When connecting pipes, be careful of direction of the main unit. Be sure to install the main unit so that [↑UPPER] mark in the label directs upward.
For connection of the refrigerant pipes, follow the arrow mark in the label and connect pipes after confirming directions of indoor unit and outdoor unit.

Piping material and dimensions

Model name	Indoor unit capacity type	Diameter of refrigerant pipe	Notes
RBM-PMV0363E	005 to 012 type	ø6.4	
RBM-PMV0903E	015 to 018 type	ø6.4	
	024 to 027 type	ø9.5	

CAUTION

When connecting ø9.5 refrigerant pipes, be sure to insert a seal pipe between PMV main unit and the joint.
If the seal pipe is not inserted, refrigerant leakage is caused.

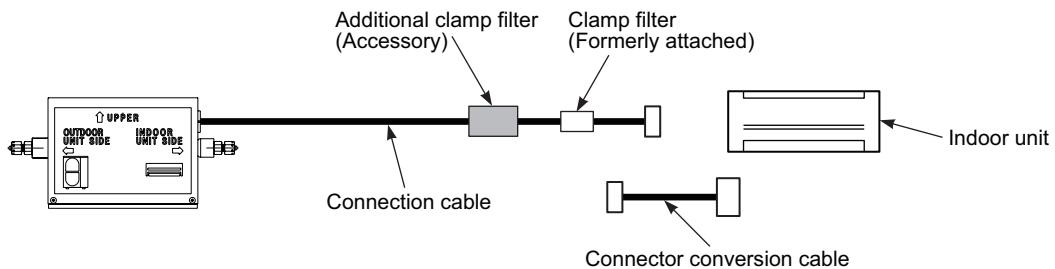

5-10-2. Wiring connections

For this product, the connector conversion cable and additional clamp filter (Accessory) are used according to the indoor unit to be connected.

For the corresponding unit and how to use the conversion cable and clamp filter, refer to the following description.

The connector conversion cable is not used for the indoor unit, but the additional clamp filter is used.

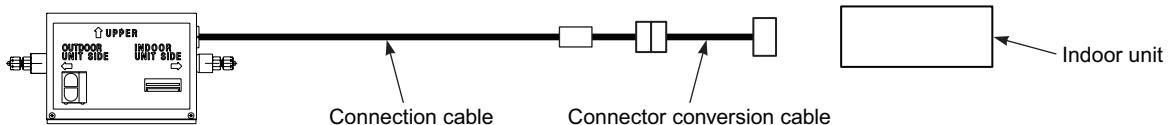

High Wall Type 3 series (MMK-AP***3H*)

- Mount the clamp filter (Accessory) to the connection wire (11 m) out of the PMV kit main body. Refer to the mounting method.
- Remove the connector conversion cable mounted to the connection cable out of the PMV kit main body and then connect it.

The additional clamp filter is not used for the indoor unit, but the connector conversion cable is used.

Indoor unit except above indoor units

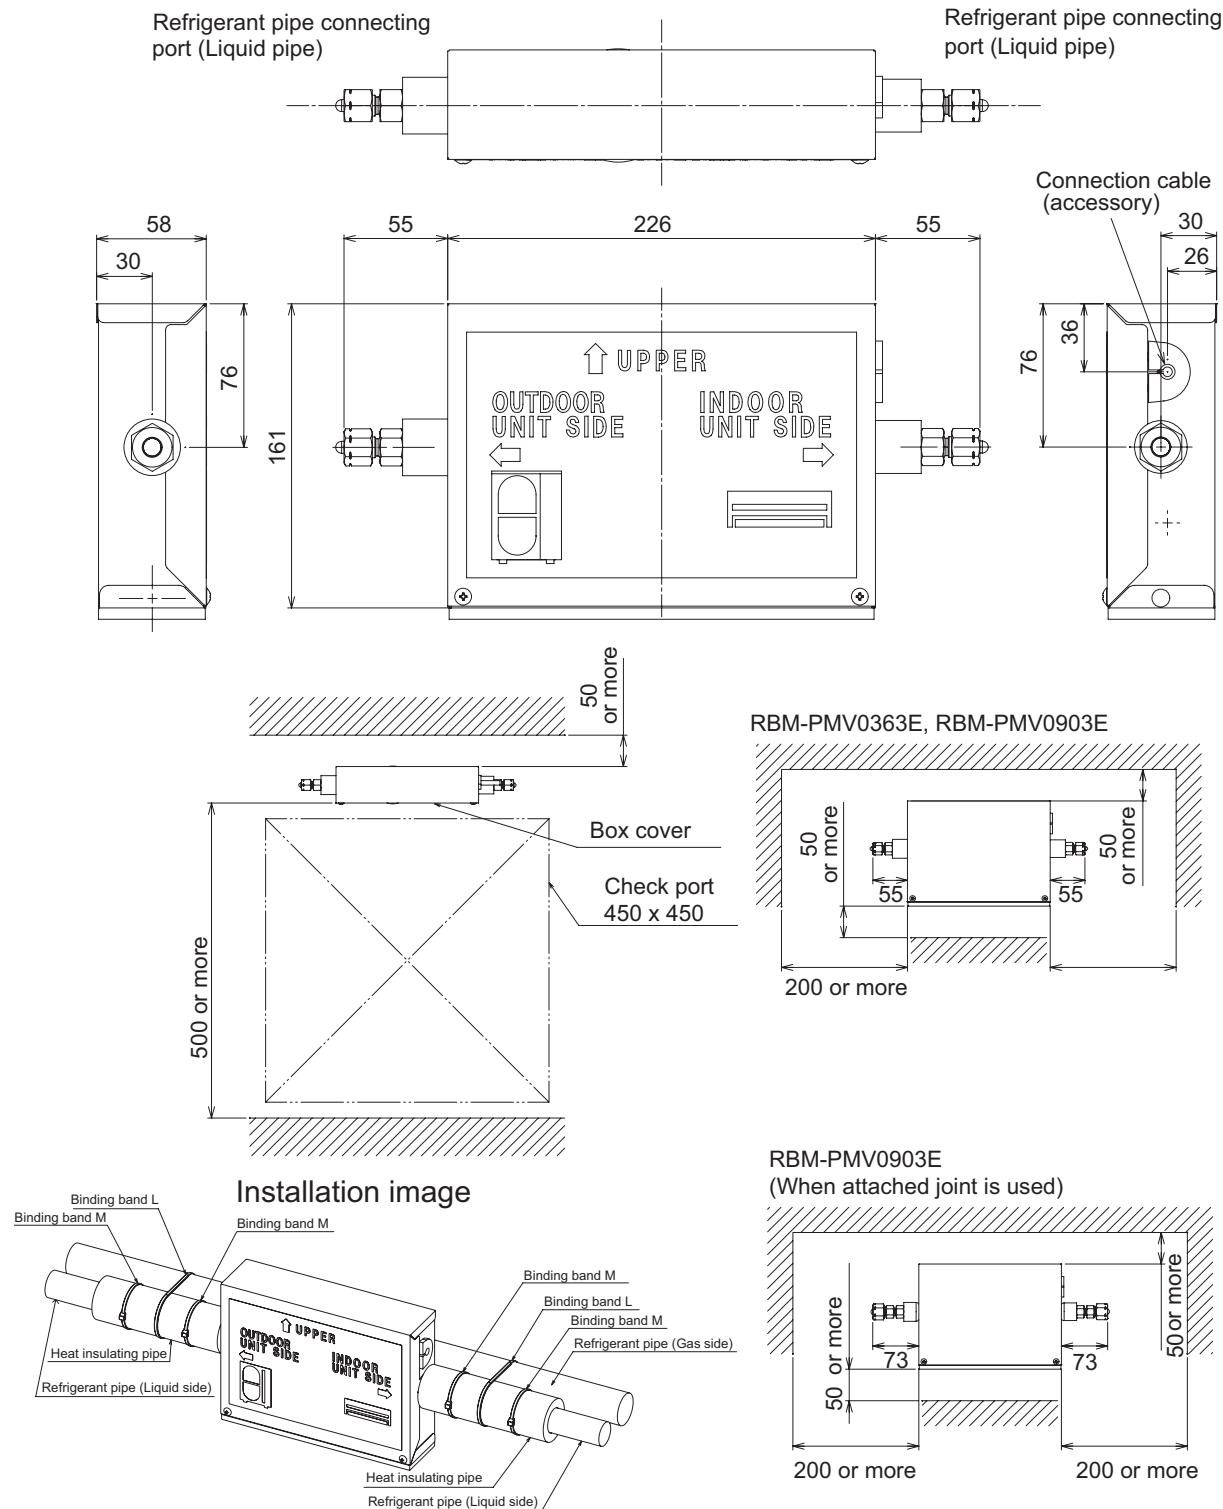

5 Outdoor unit

5-10-3. Dimensional drawing

• PMV Kit

RBM-PMV0363E, RBM-PMV0903E

Note: All dimensions are in mm.
