SIEMENS

ENVIRONMENTAL PRODUCT DECLARATION

Wired Sensors

Room Sensors QAA..., QFA..., QPA...

Type II according to ISO 14021 / based on ISO 14025
including life cycle impact assessment (LCIA)

SIEMENS

General information

This environmental product declaration (EPD) is based on the international standard ISO 14025 (“Environmental labels and declarations — Type III environmental declarations”). The data in this EPD has been evaluated on a full-scale life cycle assessment (LCA) study according to ISO 14040/44, taking into account the product category rules (PCR) for electronic and electrotechnical products and systems defined in EN 50693.

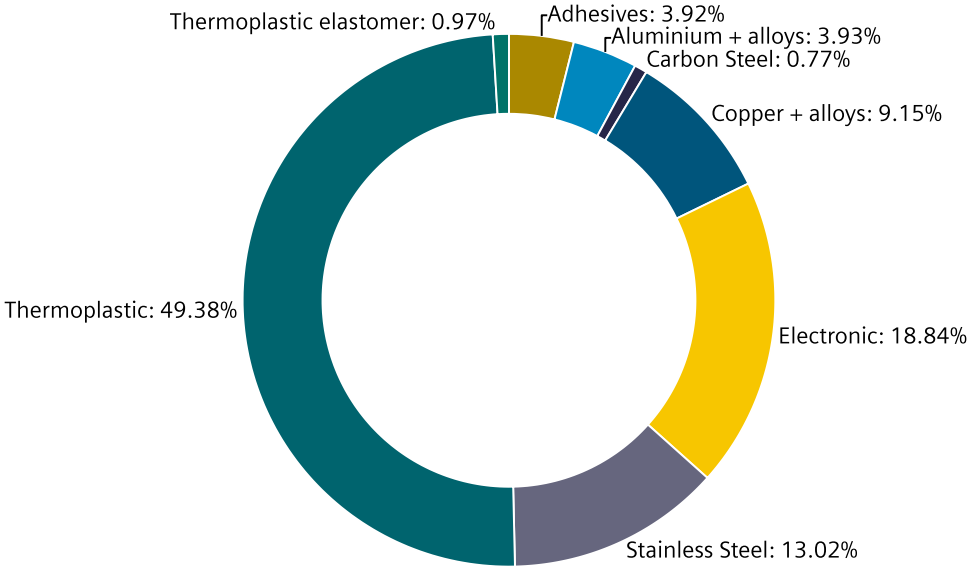

Siemens is dedicated to an environmentally conscious design of its products in line with IEC 62430 and has implemented an integrated management system according to ISO 9001, ISO 14001 and ISO 45001.

Products	All products which can be found in the appendix.
Represented by	BPZ:QFA3171 (QFA3171)
Product Description	Wired room sensors measuring temperature, relative humidity, CO2, and TVOC.
Functional Unit	Continuous acquisition of temperature, relative humidity, CO2, and TVOC. For use in room, over a reference lifetime of 10 years.
Production Site	Beijing, China

Material composition

The product weight of 0.13 kg combined with the packaging weight of 0.03 kg results in a total weight of 0.16 kg. The following chart outlines the overall material composition of the reference product, excluding packaging. Packaging consists of: Graphic paper, PE film, Corrugated box (average composition).

Product Weight 0.13 kg

Substance assessment

At Siemens, we are committed to the development and production of environmentally sound and sustainably produced equipment. This includes avoiding hazardous substances in our products without compromising their benefits for our customers.
Please visit the following website to learn more about how we comply with product-related environmental regulations like RoHS, REACH, WEEE and others: Product Related Environmental Protection

System boundaries and scenarios

The EPD covers the cradle to grave of the product including the following stages.

Manufacturing stage			Distribution	Installation	Use stage							End-of-Life stage				Benefits & loads beyond system boundary
Raw materials	Transport	Production	Transport	Assembly	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	De-Installation	Transport	Waste processing	Disposal	Reuse-Recovery-Recycling Potential
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
X	X	X	X	X	0	0	0	0	0	X	0	0	X	X	X	X

Temporal and geographical scope and representativeness	Primary data of 2024; Secondary data: LCA tool: Green Digital Twin Version 4.4, Database: One Siemens LCA Database (based on Sphera MLC CUP 2024.1). The materials and components used in production are globally sourced and have been selected from Sphera data sets according to the global or regional representativeness.
Data quality	Both primary and secondary data are used. To ensure the high quality and completeness of the LCA results, primary data have been used whenever possible. The main sources for primary data are the bill of materials and the bill of processes. Site specific data are provided by Siemens reporting system. Datasets for resources, such as electrical energy or natural gas, are chosen from the region where the device is produced and assembled. If primary data are not available, datasets reflecting state-of-the-art manufacturing technology are considered. Generic data originating from the LCA tool: Green Digital Twin Version 4.4, Database: One Siemens LCA Database (based on Sphera MLC CUP 2024.1).

Allocation	Amount of resources used and waste generated in production at Siemens is allocated based on annual production volume. For the end-of-life allocation, the "Polluter Pays" principle is adopted as required by the PCR EPDItaly007. Waste treatment processes are allocated to the product system that generates the waste until the end-of-waste state is reached. The environmental burdens of recycling and energy recovery processes are therefore allocated to the product system that generates the waste, while the product system that uses the exported energy and recycled materials receives it burden-free. Potential benefits and avoided loads from recovery and recycling processes are considered in separate Benefits & Loads beyond system boundary section.
Cut-off	No cut-off rules were applied. All inputs have been covered and nothing has been excluded intentionally.

Scenarios:

The following information describes the scenarios in the different modules of the EPD.

Manufacturing	This stage covers the extraction of natural resources, production of raw materials, manufacturing, packaging, and upstream transportation.
Transportation to production site	Primary data and EN 50693
Production energy model used	A1: Global; A3: China (CN Electricity grid-mix renewable)
Distribution	This stage covers the product's distribution.
Distribution: Transport model use	Truck (20-26 t) 1000 km
Installation	This stage covers the End-of-Life treatment of transport packaging.
Installation: Energy model used	Not relevant
Use	This stage covers the operational energy use. All other modules do not apply for this product. Different operating conditions can lead to deviations from the reference scenario.
Use: Energy model used and use scenario	B: China (CN: Electricity grid-mix standard); Energy consumption model with 0.34 W 365 days 24/7 Reference lifetime 10 years.
EoL	This stage covers the disassembly, material recycling in addition to thermal treatment of all recoverable materials and the disposal of all other materials.
EoL: Transport model use	Road Truck, 20 - 26t gross weight 1000.0 km
EoL: Energy model used	C & D: China

Life cycle assessment - results

The following impact categories characterize the product's environmental footprint. They have been calculated with characterization method EN15804+A2 (EF 3.1); LCA tool: Green Digital Twin Version 4.0, Database: One Siemens LCA Database (based on MLC CUP 2024.1).

To ensure the high quality and completeness of the LCA results, primary data have been used whenever possible. Datasets for resources, such as electrical energy or natural gas, are chosen from the region where the device is produced and assembled. If primary data are not available, datasets reflecting state-of-the-art manufacturing technology are considered.

Additional environmental information

Climate change

This chart shows the overall impact of the product on climate change – total. The operations phase is the lifecycle phase with the biggest overall impact. Different operating conditions can lead to deviations from the reference scenario.

End-of-Life results

The end-of-life stage was modelled by shredding of the device, followed by sorting and material separation process.

It leads to:

- **an overall** product recyclability of up to 31%
- **an** energy recoverability of up to 51%
- **a** minimum disposal rate of 19%

The exact final values depend on the used recycling process and add up to 100%.

Note: The device should not be disposed of as unsorted municipal waste. Special treatment for specific components may be mandated by law or recommended for environmental reasons. Observe all local and applicable laws.

Appendix

Scaling factors

The results of the LCA of the reference product can be extrapolated to other products of a homogeneous product family according to the standard EN50693. The scaling factors listed here are calculated according to this standard.

The extrapolation rules have been defined as follow:

- Manufacturing (A1-A3): $\frac{m_{plastics,i}+m_{metals,i}+13\cdot m_{PCBA,i}+m_{others,i}}{m_{plastics,ref}+m_{metals,ref}+13\cdot m_{PCBA,ref}+m_{others,ref}}$
- Distribution (A4): $\frac{m_{product,i}}{m_{product,ref}}$
- Installation (A5): $\frac{m_{product,i}}{m_{product,ref}}$
- Use Phase (B1-B7): $\frac{m_{annual\ power\ consumption,i}}{m_{annual\ power\ consumption,ref}}$
- End of life (C1-C4): $\frac{6\cdot m_{plastics,i}+0.01\cdot m_{metals,i}+1\cdot m_{PCBA,i}+0.04\cdot m_{others,i}}{6\cdot m_{plastics,ref}+0.01\cdot m_{metals,ref}+1\cdot m_{PCBA,ref}+0.04\cdot m_{others,ref}}$
- Benefits & Loads (D): $\frac{1\cdot m_{plastics,i}+4\cdot m_{metals,i}+19\cdot m_{PCBA,i}+2\cdot m_{others,i}}{1\cdot m_{plastics,ref}+4\cdot m_{metals,ref}+19\cdot m_{PCBA,ref}+2\cdot m_{others,ref}}$

To extrapolate the impact from the reference product to another product from the range, multiply the following scaling factors to the impact category per life cycle stage from page 5:

Legal Disclaimer

This Environmental Product Declaration (EPD) is for information purposes only. It is based upon the standards mentioned above. This EPD does not warrant or guarantee the composition of a product or that the product will retain a particular composition for a particular period. Therefore, all warranties, representations, conditions, and all other terms of any kind whatsoever implied by statute or common law are – to the fullest extent permitted by applicable law – excluded.

Siemens therefore does not assume any liability for any error or for any consequence which may arise from the use of this information to the maximum extent under the law.

Please be aware that the data of this EPD cannot be compared with data calculated based upon product category rules (PCRs) other than the standards mentioned above. The values given are only valid within the context specified and cannot be used directly to draw up the environmental assessment of an installation.

Subject to changes and errors.

The information given in this document only contains general descriptions and/or performance features which may not always specifically reflect those described, or which may undergo modification in the course of further development of the products. In particular no assurance is given that those descriptions and performance features stand under warranty or guarantee in sense of any liability for any error or for any consequence which may arise from the use of this information to the maximum extent under the law. The requested performance features are binding only when they are expressly agreed upon in the concluded contract.

All product designations may be trademarks or product names of Siemens AG or other companies whose use by third parties for their own purposes could violate the rights of the owners.
