Fixing systems for installing luminaires

Complete systems and single components

The one-off manufacture of individual assembly systems for installing lighting systems is often very costly. The patented Complete Assembly System is a low-cost, standard fixing system for light fittings on industrial rails, walls or steel beam constructions.

Stability and material

A specially developed shaping method that ensures a high degree of stability is used for this programme. Stainless steel with optimised material

strength is used in environments with aggressive media. Components that are not made of stainless steel are hot-dip galvanised after manufacture in accordance with DIN EN ISO 1461.

Assembly

The assembly systems have been designed for inside and outside areas. The compact system kits can be assembled by just one person in a very short time. All individual parts are simply fitted together and fas-

tened by screws. Since there is no need for drilling or welding, it is possible to work in hazardous areas without a „hot work permit“.

Safety

The assembly system is always installed from the safe side of the work platform, i.e. without scaffolding! The specified hand-rail height and the avoidance of protruding metal parts or screws in the construction provides a high standard of safety.

Cost-saving maintenance

The use of tilting luminaire masts results in decisive cost advantages due to minimised maintenance. Thus, for example, changing a lamp without scaffolding or assembly aids is possible for just one person in a very short time. The costs for cleaning and repair work can also be minimised.

Features

- Easy to install
- Corrosion protected (stainless steel or hot-dip galvanized)
- Extra solid construction ensures high wind load resistance
