Ref. 9686 CITYMAX VDS 102 PUSHBUTTON MODULE

DESCRIPTION

Spare push button module for incorporating into CityMax panels and ADS/VDS systems.

Description 102:

- 1: SIMPLE Push button
- 02: 2 ROWS of buttons.

Integrated call buttons in push button modules for CityMax panels, to be inserted in the panel’s recess. The push button module's assembly is very easy. The fastening system consists of a slight pressure from the interior to the exterior. Finally, the different push button modules are joined via easy to plug connectors that are included in the modules themselves.

The push buttons are metallic and rounded, in keeping with the curved profile of the panel. They include special silver-plated contacts that provide greater durability.

The buttons include a card holder to put up a label with the name of the householder and the door number. When the light button on the front of the amplifier is pressed, a soft light makes it possible to see the card-holders, even in complete darkness.

CityMax is the range of street panels of "continuous profile" and modular composition. With very similar design and characteristics to the City Classic panel, this panel distinguishes itself in practical aspects that affect the composition and assembly.

This range is composed of 4 panels or frames into which the module can be easily fitted: amplifier, buttons, camera... etc. CityMax panels have the same measurements as the City Classic series 3, 5, 7 and 8.

Aluminum colour

The amplifier emits a confirmation sound when the call button is pressed.

TECHNICAL FEATURES

- Consumption when module is on: 25 mA.
- Push button module size: 108 x 66.5 mm (width-height).
- Push button module available in SIMPLE and DOUBLE.
- For ADS/VDS systems. Call extension modules are not required.
